OFFICE: Design

SUBJECT: Field Exam (D2)

A field exam was held on Friday, April 21 2017, to review the proposed plan for replacing a bridge over a drainage ditch on IA 38, 1-mile north of U.S. 30.

Those present for the field exam included Ken Yanna, Steve Flockhart, Newman Abuissa and Bill Kreinbring from District 6; Patricia Schwarz from the Office of Bridges and Structures and Jason Strum and Kevin Patel from the Office of Design.

IA 38 is classified as an access route and is a maintenance service level "C" roadway. The federal bridge sufficiency rating is 67.4. The 2020 and 2040 average daily traffic estimates are 1,500 ADT and 1,800 ADT with 16% trucks, respectively.

The proposed project will remove the existing 29'6" long x 30' wide single span concrete slab bridge and construct a triple 10' x 9' x 86' RCB. There is an existing 24" drainage tile that runs under the existing bridge. This tile line shall be relocated so that it does not lie under the footprint of the new RCB. Once the new RCB has been constructed and the tile line relocated, the RCB can be backfilled with floodable backfill and suitable soil. New 9" PCC pavement and subbase can then be placed in the void created by the removal of the bridge. The new RCB length will accommodate a 22' roadway with 10' wide granular shoulders and 6:1/3:1 foreslopes.

The existing tile line will need to be surveyed to determine the existing flowlines. Once the RCB and tile line design has been established the design should be reviewed with the drainage district for their approval.

There is a 36" roadway culvert on 130th Street that appears it will conflict with the new RCB. Therefore, it was recommended that this pipe be removed and a new roadway culvert installed. A safety dike should be constructed on the east side of IA 38, opposite the side road intersection.

The existing bridge guardrail will be removed and should become property of the contractor. The guardrail on the west side of the roadway is 181' foot long with 28 posts, while the guardrail on the east side is 158' long with 24 posts.

Minor channel shaping will be required at the inlet and outlet end of the RCB in order to provide a smooth transition to the drainage ditch.

The articulated block mat under the existing bridge should be removed.

Right of way will be required to construct and maintain the project.

Traffic will be maintained via an off-site detour during construction. The detour will begin at the intersection of IA 38 and U.S. 30 in Stanwood and proceed west on U.S. 30, 14.5 miles to IA 1. The detour will then go north approximately 12 miles on IA 1 to the intersection with U.S. 151. Traffic will then proceed to the northeast on U.S. 151 for approximately 15 miles to the intersection with IA 38. The out of distance travel is approximately 13.5 miles. It was recommended that no lane closures be allowed on IA 38 until June 1st to avoid impacting school bus routes.

No plans are included in this submittal; however, plan sheets may be viewed as pdf files at PW:\projectwise.dot.int.lan:PWMain\Documents\Projects\1603803015\Design\DesignEvents\D2\D2_16038039_Plan.pdf

This project is currently scheduled for an October 2019 letting. The final concept cost estimate for this project was \$1,031,850. The current cost estimate is now approximately \$675,000 (\$435,000 for the RCB items and \$240,000 for the roadway items). The reduction in cost is attributed to changing from the 36' x 10' concrete arch culvert that was shown in the final concept to a triple 10' x 9' RCB. This change was recommended due to the existing soft soils present and the possible adverse impacts to the 24" tile line under the existing bridge.

SUBJECT: Project Concept Statement; (Final Approval, D0)

This project involves the replacement of the IA 38 bridge (Maint. No 1636.1S030) over a drainage ditch, 1 mile north of U.S. 30.

A concept review was held on May 12, 2015. Those present included Doug McDonald, Roger Walton, Newman Abuissa, Trent Sorgenfrey and Steve Flockhart from the District 6 Office; Chris King from the Office of Bridges and Structures; and Kevin Patel and Jean Borton from the Office of Design.

Three alternatives were considered for replacing the existing 29'6" x 30' bridge, which included a 100 ft. x 40 ft. slab bridge, a twin precast 10 ft. x 10 ft. x 84 ft. reinforced box culvert, and a 36' x 10' concrete arch culvert. The slab bridge was dismissed from further consideration due to the close proximity of the sideroad intersection which would require relocation to avoid conflict with the bridge guardrail. The twin RCB was also dismissed for further evaluation as the RCB would be built directly over an existing 24" concrete drainage tile located in the bottom of the stream bed, resulting in undesirable loads on the drainage tile. Therefore, as the concrete arch culvert avoided these concerns it will be the recommended alternative. The concrete arch culvert is estimated to cost \$1,031,850.

Additional right of way will not be required.

Traffic will be maintained via an off-site detour during construction.

The Draft Project Concept Statement was sent out for review and comment with concerns to be resolved by Tuesday, July 26, 2016. Comments received during the review period have been considered and resolved.

This project is recommended for construction in FY 2020. The Office of Bridges and Structures will coordinate plan preparation with assistance from the Office of Design.

I. STUDY AREA

A. Project Description

This project involves the replacement of the IA 38 bridge (Maint. No 1636.1S030) over a drainage ditch, 1 mile north of U.S. 30.

Three alternatives were considered for replacing the existing 29'6" x 30' bridge, which included, a 100 ft. x 40 ft. slab bridge, a twin precast 10 ft. x 10 ft. x 84 ft. reinforced box culvert, and a 36' x 10' concrete arch culvert. The slab bridge was dismissed from further consideration due to the close proximity of the sideroad intersection which would require relocation to avoid conflict with the bridge guardrail. The twin RCB was also dismissed for further evaluation as the RCB would be built directly over an existing 24" concrete drainage tile located in the bottom of the stream bed, resulting in undesirable loads on the drainage tile. Therefore, as the concrete arch culvert avoided these concerns it will be the recommended alternative. The concrete arch culvert is estimated to cost \$1,031,850.

B. Need for Project

Cracks with exposed and rusted reinforcing are found at both the deck and substructures. All bridge components, including the overlay, are at the end of their service life. Different levels of deterioration are spread throughout the bridge. In addition, the structure was designed for H20 loads. Provided with the size and condition of the structure, bridge repair in conjunction with bridge strengthening would not be an economical option; therefore, the structure should be replaced.

Cedar County BRFN-038-2(39)--39-16 PIN: 15-16-038-030

Page 2

Looking East

SHEET NUMBER

A.3

C. <u>Present Facility</u>

This is a 29'6" x 30' single span concrete slab bridge which was constructed in 1952 and overlaid in 1983. A permanent scour countermeasure project was completed in 2010 by placing an articulating block mat under the bridge.

IA 38 in the project area is 22' wide Type B asphalt cement concrete pavement with 10' wide granular shoulders and 4:1 foreslopes, constructed in 1955. HMA resurfacing was accomplished in 1965 and 1994.

D. Traffic Estimates

The 2020 and 2040 average daily traffic estimates are 1,500 ADT with 16% trucks and 1,800 ADT with 16% trucks, respectively.

E. Sufficiency Ratings

IA 38 is classified as an access route and is a maintenance service level "C" road. The federal bridge sufficiency rating is 67.4.

F. Access Control

Access rights will not be acquired for this project.

Cedar County BRFN-038-2(39)--39-16 PIN: 15-16-038-030 Page 3

G. Crash History

During the five-year study period from January 1, 2010 through December 31, 2014, there were no crashes in the vicinity of the bridge.

II. PROJECT CONCEPT

A. <u>Recommended Alternative</u>

Replace with a Concrete Arch Culvert

The existing 29'- 6 x 30', concrete slab bridge will be replaced with a 36' x 10' x 84' concrete arch culvert.

The typical roadway cross section will consist of 24 ft. wide pavement with 10 ft. granular shoulders and 6:1/3:1 foreslopes.

The existing bridge will be removed along with a total of 38 ft. of adjacent bridge approach section (19 ft. each end of the bridge) to allow for the new arch culvert to be installed. Piling will be required for the arch culvert footings. The arch culvert will span over the existing 24" concrete drainage tile that is located below the stream bed. After the culvert has been installed, floodable backfill and class 10 material will be used as backfill material. New 10" PCC pavement, along with 6" of granular subbase and 12" of special backfill will provide the new pavement structure. New 10' wide granular shoulders and 6:1/3:1 foreslopes will then be provided. The new 6:1/3:1 barnroof grading will transition into and around the existing southern radius return for 130th Street, just north of the existing bridge site. A safety dike will be constructed opposite the side road.

The articulated block mat under the existing bridge should be removed. Care shall be exercised to avoid damaging the existing 24" drainage tile that is under the existing bridge.

Class E revetment will be placed at the ends of the RCB. Apply erosion control and rural seeding and fertilizing to all disturbed areas.

Right of way will not be required for this project.

Traffic will be maintained on an offsite detour.

Cedar County

BRFN-038-2(39)--39-16 PIN: 15-16-038-030

Sub-total	173,200
M&C 30%	52,000
Total	\$225,200
Project Total	\$1,031,850

B. Detour Analysis

Traffic will be maintained via an off-site detour during construction. The detour will begin at the intersection of IA 38 and U.S. 30 in Stanwood and proceed west on U.S. 30, 14.5 miles to IA 1. The detour will then go north approximately 12 miles on IA 1 to the intersection with U.S. 151. Traffic will then proceed northeastly on U.S. 151 for approximately 15 miles to the intersection with IA 38. The out of distance travel is approximately 13.5 miles. This results in an out of distance user cost of approximately \$301,000, based upon a closure period of 60 days.

Cedar County BRFN-038-2(39)--39-16 PIN: 15-16-038-030

Page 5

C. Construction Sequence

It is anticipated that all work on this project will be awarded to one prime contractor. The Office of Bridges and Structures will coordinate the plan preparation with assistance from the Office of Design.

D. ADA Accommodations

There are no bike paths or sidewalks adjacent to IA 38; therefore, no ADA accommodations are planned in conjunction with this project.

E. Special Considerations

The ABC Rating Score of 36 is less than the first stage filter threshold of 50, therefore this bridge will not be considered for any further ABC evaluations.

No bike path or sidewalk will be required as part of this project.

Right of Way will not be required for this project.

The Office of Location and Environment has reviewed this project and no special concerns were noted.

F. Program Status

Site data has been developed by the Office of Design. This project is listed in the 2017-2021 Iowa Transportation Improvement Program for \$750,000 in 2020. Right of way is shown in 2019 for \$15,000. Costs for this project may be eligible for bridge replacement funds.

General Information

Measurement units for this survey are US survey feet. This survey is for proposed Bridge replacement. This project is a Partial DTM with Photo control. Bentley OpenRoads was used to map this survey.

Vertical Control

Vertical datum for this survey is NAVD88 (Computed using Geoid12A). Ellipsoidal heights were transferred to project points 1 and 2 from nearby lowa RTN reference stations using static survey and post processing.

Survey elevations were obtained on the bridge features and are compared to the 1951 FN 234 situation plan sheet at Station 52+53.0 as follows:

Plan north and south abutment elevation = 841.65 Survey north and south abutment elevation = 822.81 Plan elevation= survey elevation + 18.84

Plan south end floor grade elevation = 843.44 Survey south end floor grade elevation = 824.76 Plan elevation= survey elevation + 18.68

Plan north end floor grade elevation = 843,44 Survey north end floor grade elevation = 824.82 Plan elevation= survey elevation + 18.62

There were no benchmarks remaining inside the survey limits from FN-234 plans. The best estimate that can be made between plan and survey datum is Plan datum = Survey datum + 18.71' with a standard deviation of 0.11'.

Horizontal Control

The project coordinate system for this survey is Iowa Regional Coordinate System Zone 10 (U.S. Survey Feet). This survey control is relative to IaRTN reference stations. IaRTN Reference Station coordinates are relative to the National Reference Station network datum: NAD83 (2011) for Epoch 2010.00. Coordinates were transferred to project points 1 and 2 from nearby Iowa RTN reference stations using static survey and post processing.

Alignment Information

The horizontal alignment for this survey is a retrace of As-built Plans FN-234. Survey stationing was equated to the plan Pl at STA 39+78.00 and run ahead without station equation to POT Sta 79+95.70.

Alignment Name: SUR038

Station Northing Easting

PI 39+78.00 8024493.995 20640129.607 POT 79+95.70 8028511.677 20640117.162

Tangential Direction: N 0°10'39" W Tangential Length: 4017.70

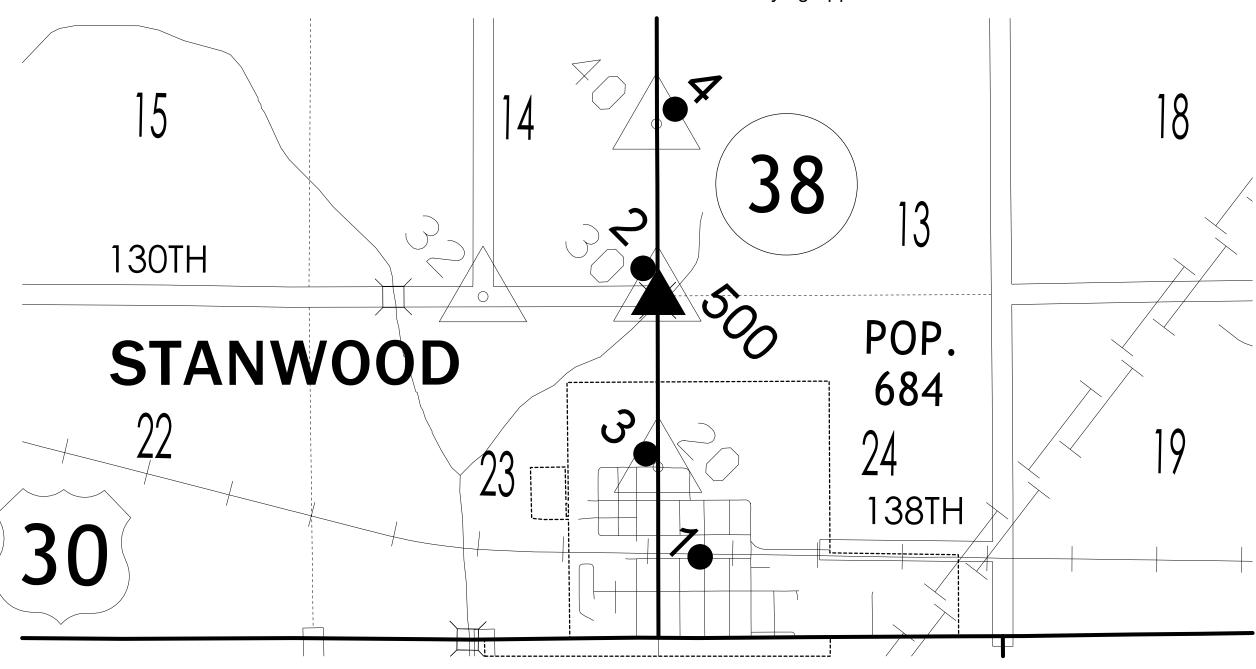

Survey stationing relates to as built plan stationing as follows:

PI Sta. 39+78..0 Plans = Survey PI Sta. 39+78..0

POT Sta 79+96.3 Plans = Survey POT STA 79+95.70

CONTROL POINT VICINITY MAP

This map is a guide to the vicinity of the primary project control points
Primary control is for use with RTK base stations and for RTN validation.
Future surveys will use primary project control to establish temporary control as needed for construction or other surveying applications.

HORIZ. DATUM: NAD83(2011) EPOCH 2013.00

VERT. DATUM: NAVD88

Ia. Regional Coordinate System Zone 10

Coordinate listing from next sheet will be used with IaRTN for monument recovery. No other reference ties are given.
