		DESCRIPTION.
		Details are for the installation of a temporary
		slope drain on the foreslope of the roadway fill. The intent of
		the temporary slope drain is to prevent foreslope erosion during
		construction and to minimize the water pollution which might
		be caused by soil erosion from the project.
		CONSTRUCTION.
		At the completion of each day's grading, a temporary berm will
		be constructed on both sides of the subgrade. At points a maxi-
		mum of 500' apart, at low points of vertical curves, and as deter-
		mined by the Engineer, temporary intercepting wing dikes shall
		be graded and slope drains installed. All special grading work
		shall be considered incidental to other grading work on the
		project.
		Foreslopes with a vertical height of ten feet or less shall not have
		temporary slope drains installed.
		MATERIALS.
		The temporary slope drain shall consist of a length of pipe cap-
		able of extending to the top of foreslope when all grading has
		been completed. The pipe shall be moved up the foreslope to
		the new temporary top of slope berm at the completion of each
		day's work. The pipe shall be Solid Tubing complying with all
		requirements of ASTM F 405, Standard Duty Tubing.
		METHOD OF MEASUREMENT.
		Method of measurement shall be along the centerline of pipe in
		its final position.
		BASIS OF PAYMENT.
		The price bid for "Temporary Slope Drain, As Per Plan", measured
		in lineal feet, shall be considered full compensation for the con-
		struction of all required temporary top of slope berms, for
		installing and maintaining the slope drain for the duration of the
		contract, and for removal of all materials upon the completion of

POLLUTION PREVENTION PLAN

This Base Pollution Prevention Plan (PPP) includes information on Roles and Responsibilities, Project Site Description, Controls, Maintenance Procedures, Inspection Requirements, Non-Storm Water Controls, Potential Sources of Off Right-of-Way Pollution, and Definitions. This plan references other documents rather than repeating the information contained in the documents. A copy of this Base Pollution Prevention Plan, amended as needed per plan revisions or by contract modification, will be readily available for review.

All contractors shall conduct their operations in a manner that controls pollutants, minimizes erosion, and prevents sediments from entering waters of the state and leaving the highway right-of-way. The prime contractor shall be responsible for compliance and implementation of the PPP for their entire contract. This responsibility shall be further shared with subcontractors whose work is a source of potential pollution as defined in this PPP.

I. ROLES AND RESPONSIBILITES

A. Designer:
1. Prepares Base PPP included in the project plan.
2. Prepares Notice of Intent (NOI) submitted to Iowa DNR.
3. Signature authority on the Base PPP and NOI.

B. Contractor/Subcontractor:
1. Affected contractors/subcontractors are co-permittees with the IDOT and will sign a certification statement adhering to the requirements of the NPDES permit and this PPP plan. All co-permittees are legally required under the Clean Water Act and the Iowa Administrative Code to ensure compliance with the terms and conditions of this PPP.
2. Submit a detailed schedule according to Article 2602 of the Specifications and any additional plan notes.
3. Install and maintain appropriate controls.
4. Supervise and implement good housekeeping practices.
5. Conduct joint required inspections of the site with inspection staff.
6. Signature authority on Co-Permittee Certification Statements and storm water inspection reports.

C. RCE/Inspector:
1. Update PPP whenever there is a change in design, construction, operation or maintenance, which has a significant effect on the discharge of pollutants from the project.
2. Maintain an up-to-date list that identifies contractors and subcontractors as co-permittees.
3. Make these plans available to the DNR upon their request.
4. Conduct joint required inspections of the site with the contractor/subcontractor.
5. Complete an inspection report after each inspection.
6. Signature authority on storm water inspection reports and Notice of Discontinuation (NOD).

II. PROJECT SITE DESCRIPTION

A. This Pollution Prevention Plan (PPP) is for the construction of I-74 mainline, ramps, and and local roads.
B. This PPP covers approximately 100 acres with an estimated 63.6 acres being disturbed. The portion of the PPP covered by this contract has 10 acres disturbed.
C. The PPP is located in an area of one soil association Kenyon-Floyd-Clyde.
The estimated average SCS runoff curve number for this PPP after completion will be 94.
D. Storm Water Site Map - Multiple sources of information comprise the base storm water site map including:
1. Drainage patterns – Plan and Profile sheets and Situation plans.
2. Proposed Slopes – Cross Sections.
3. Areas of Soil Disturbance – construction limits shown on Plan and Profile sheets.
4. Location of Structural Controls – Tabulations on C sheets.
5. Locations of Non-structural Controls – Tabulations on C sheets.
6. Locations of Stabilization Practices – generally within construction limits shown on Plan and Profile sheets.
7. Surface Waters (including wetlands) – Plan and Profile sheets.
8. Locations where storm water is discharged – Plan and Profile sheets.
E. The base site map is amended by contract modifications and progress payments of completed erosion control work.
F. Runoff from this work will flow into the Mississippi River.

III. CONTROLS

A. The contractor's work plan and sequence of operations specified in Article 2602.03 for accomplishment of storm water controls should clearly describe the intended sequence of major activities and for each activity define the control measure and the timing during the construction process that the measure will be implemented.
B. Preserve vegetation in areas not needed for construction.
C. Section 2601 and 2602 of the Standard Specifications define requirements to implement erosion and sediment control measures. Actual quantities used may vary from the Base PPP and amendment of the plan will be documented via fieldbook entries or by contract modification. Additional erosion and sediment control items may be required as determined by the inspector and/or contractor during storm water monitoring inspections. If the work involved is not applicable to any contract items, the work will be paid for according to Article 1109.03 paragraph B.
1. EROSION AND SEDIMENT CONTROLS
a. Stabilization Practices
1) Site plans will ensure that existing vegetation is preserved where attainable and disturbed portions of the site will be stabilized.
2) Stabilization measures shall be initiated as soon as practicable in portions of the site where construction activities have temporarily or permanently ceased.
3) Temporary stabilizing seeding shall be completed as the disturbed areas are constructed. If construction activity is not planned to occur in a disturbed area for at least 21 days, the area shall be stabilized by temporary seeding or mulching within 14 days. Other stabilizing methods shall be used outside the seeding time period.
4) Stabilization measures to be used for this project are located in the Estimated Project Quantities (100-1A) and Estimate Reference Information (100-4A) located on the C sheets of the plan. Additional items may be found in the Inspector's Daily Reports (IDR) or Contract Modifications.
b. Structural Practices
1) Structural practices will be implemented to divert flows from exposed soils and detain or otherwise limit runoff and the discharge of pollutants from exposed areas of the site.
2) Structural items to be used for this project are located in the Estimated Project Quantities (100-1A) and Estimate Reference Information (100-4A) located on the C sheets of the plan, as well as all other item specific Tabulations. Typical drawings detailing construction of the devices to be used on this project can be found on the B sheets of the plan or are referenced in the Standard Road Plans Tabulation.
c. Storm Water Management
1) Measures shall be installed during the construction process to control pollutants in storm water discharges that will occur after construction operations have been completed. The installation of these devices may be subject to Section 404 of the Clean Water Act.
2. OTHER CONTROLS
a. Contractor disposal of unused construction materials and construction material wastes shall comply with applicable state and local waste disposal, sanitary sewer, or septic system regulations. In the event of a conflict with other governmental laws, rules and regulations, the more restrictive laws, rules or regulations shall apply.
1) Vehicle Entrances and Exits - Construct and maintain entrances and exits to prevent tracking of sediments onto roadways.
2) Material Delivery, Storage and Use - Implement practices to prevent discharge of construction materials during delivery, storage, and use.
3) Stockpile Management - Install controls to reduce or eliminate pollution of storm water from stockpiles of soil and paving.
4) Waste Disposal - Do not discharge any materials, including building materials, into waters of the state, except as authorized by a Section 404 permit.
5) Spill Prevention and Control - Implement procedures to contain and clean-up spills and prevent material discharges to the storm drain system and waters of the state.
6) Concrete Residuals and Washout Wastes - Designate temporary concrete washout facilities for rinsing out concrete trucks. Provide directions to truck drivers where designated washout facilities are located.
7) Vehicle and Equipment Cleaning - Employ washing practices that prevent contamination of surface and ground water from wash water.
8) Vehicle and Equipment Fueling and Maintenance - Perform on site fueling and maintenance in accordance with all environment laws such as proper storage of onside fuels and proper disposal of used engine oil or other fluids on site.
9) Litter Management - Ensure employees properly dispose of litter.
3. APPROVED STATE OR LOCAL PLANS
During the course of this construction, it is possible that situations will arise where unknown materials will be encountered. When such situations are encountered, they will be handled according to all federal, state, and local regulations in effect at the time.

IV. MAINTENANCE PROCEDURES

The contractor is required to maintain all temporary erosion and sediment control measures in proper working order, including cleaning, repairing, or replacing them throughout the contract period. This shall begin when the features have lost 50% of their capacity.

V. INSPECTION REQUIREMENTS

A. Inspections shall be made jointly by the contractor and the contracting authority at least once every seven calendar days and after each rain event that is ¼" or greater. Storm water monitoring inspections will include:
1. Date of the inspection.
2. Summary of the scope of the inspection.
3. Name and qualifications of the personnel making the inspection.
4. Rainfall amount.
5. Review erosion and sediment control measures within disturbed areas for the effectiveness in preventing impacts to receiving waters.
6. Major observations related to the implementation of the PPP.
7. Identify corrective actions required to maintain or modify erosion and sediment control measures.
B. Include storm water monitoring inspection reports in the Amended PPP. Incorporate any additional erosion and sediment control measures determined as a result of the inspection. Immediately begin corrective actions on all deficiencies found and complete all actions within 3 calendar days of the inspection.

VI. NON-STORM WATER DISCHARGES

This includes subsurface drains (i.e. longitudinal and standard subdrains) and slope drains. The velocity of the discharge from these features may be controlled by the use of patio blocks, Class A stone, erosion stone or other appropriate materials.

VII. POTENTIAL SOURCES OF OFF RIGHT-OF-WAY (ROW) POLLUTION

Silts, sediment, and other forms of pollution may be transported onto highway right-of-way (ROW) as a result of a storm event. Potential sources of pollution located outside highway ROW are beyond the control of this PPP. Pollution within highway ROW will be conveyed and controlled per this PPP.

VIII. DEFINITIONS

A. Base PPP - Initial Pollution Prevention Plan.
B. Amended PPP - May include Plan Revisions or Contract Modifications for new items and fieldbook entries made by the inspector.
C. IDR - Inspector's Daily Report – this contains the inspector's daily diary and item postings.
D. Controls - Methods, practices, or measures to minimize or prevent erosion, control sedimentation, control storm water, or minimize contaminants from other types of waste or materials.
E. Signature Authority - Representative from Designer, Contractor/Subcontractor, or RCE/Inspector authorized to sign various storm water documents.

EROSION CONTROL
(URBAN SEEDING)

Following the completion of work in a disturbed area, place seed, fertilizer, and mulch on the disturbed area as follows:

SEEDING MIXTURE: Seeding Rate: 4 lbs. per 1000 sq. ft.

Bluegrass, KY	70%
Fescue, Creeping Red	20%
Ryegrass, Perennial (Fineleaf) (Derby, Manhattan or equivalent)	10%

FERTILIZER:
17 lbs. of 13-13-13 (or equivalent) commercial fertilizer per 1000 sq. ft.

MULCH:
70 lbs. of dry cereal straw per 1000 sq. ft. For areas disturbed, but not seeded by September 30th, scarify to a 3 inch depth and mulch. Consolidate all mulch into the soil with a mulch stabilizer.

Use Certified Noxious Weed Seed Free Mulch as determined by the Iowa Crop Improvement Association or adjacent state's Crop Improvement Association.

Preparing the seedbed and furnishing and applying seed, fertilizer, and mulch is incidental to mobilization and will not be paid for separately.

252-1
10-16-12

TEMPORARY CROSSINGS AND DETOURS

Blading, shaping, and other work in preparation for maintaining temporary crossings or detours is incidental to other work. Furnish and spread additional granular surfacing needed for temporary crossings or detours during construction at the contract price.

253-1
10-18-11

MEDIAN CROSSOVER

The Contractor is prohibited from using any established or other type median crossover on this project unless specifically designated for the Contractor's use by this plan.

213-3
10-18-11

SUBSOIL TILLAGE

All borrow areas, stockpile areas, haul roads, and areas used for equipment on this project require subsoil tillage to an average depth of 16 to 20 inches prior to placement of topsoil and/or stabilizing crop seeding. Complete this tillage at 3 foot maximum centers and at right angles to the finished slope.

Use tillage equipment equipped with an arrowhead type shoe that will provide lateral displacement and limit the movement of the subsoil to the surface. Obtain the Engineer's approval for the equipment. This work is incidental to other work on the project.

Following the subsoil tillage, the area is to remain in a "loosened" condition. Additional compaction or the operation of heavy equipment, other than required for topsoil placement and shaping, will not be allowed on areas which have received subsoil tillage.

254-1

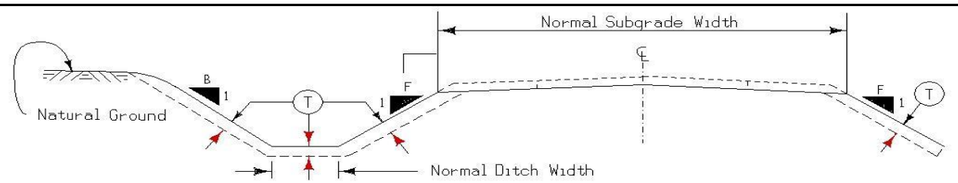
TABULATION OF SPREADING TOPSOIL



Perform this work according to Section 2105. Prior to placing topsoil on any cohesive soil, scarify the area to be covered to a minimum depth of 3 inches.

Appropriate adjustments have been made in the template quantities to reflect the placement of topsoil on foreslope, backslope and ditch bottom as detailed hereon.

TRAFFIC SIGNAL GENERAL NOTES

1. ALL QUANTITIES SHOWN IN THE PLANS AND SPECIFICATIONS ARE FOR INFORMATIONAL AND ESTIMATING PURPOSES ONLY. THE CONTRACTOR'S LUMP SUM BID FOR THIS PROJECT SHALL INCLUDE ALL LABOR AND MATERIAL NECESSARY TO PROVIDE A COMPLETE AND FUNCTIONAL TRAFFIC SIGNAL SYSTEM IN CONFORMANCE WITH THE PLANS AND SPECIFICATIONS.

2. THE PLAN LOCATIONS OF UNDERGROUND UTILITIES ARE APPROXIMATE ONLY. THE CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES PRIOR TO EXCAVATION ON THE PROJECT.

3. THE LOCATIONS OF ALL FOOTINGS, HANDHOLES, AND CONDUIT ARE TO BE COORDINATED WITH THE ENGINEER AND ARE SUBJECT TO ADJUSTMENT IN THE FIELD BY THE ENGINEER.

4. "GR/TR/PR" REPRESENTS "GR" = GROUND WIRE, "TR" = TRACER WIRE, "PR" = PULL ROPE.

5. THE STATIONS AND OFFSETS LISTED ON THE SIGNAL PLANS ARE TO THE CENTER OF THE ITEM UNLESS OTHERWISE NOTED.

6. ANY COMPONENT OF AN EXISTING TRAFFIC SIGNAL INSTALLATION TO BE REMOVED SHALL BE REMOVED BY THE CONTRACTOR AND DELIVERED TO THE IOWA DEPARTMENT OF TRANSPORTATION, UNLESS OTHERWISE DIRECTED BY THE PROJECT ENGINEER.

7. THE CONTRACTOR HAS THE OPTION TO BORE OR TRENCH CONDUIT; HOWEVER, CONDUIT SHALL BE BORED UNDER NEW OR EXISTING PAVEMENT. PAVEMENT SHALL NOT BE DISTURBED BY SIGNAL CONSTRUCTION.

8. AREAS DISTURBED BY CONSTRUCTION SHALL BE RESTORED TO THEIR ORIGINAL CONDITION AT THE CONTRACTOR'S EXPENSE.

9. ALL MOUNTED SIGNALS HEADS SHALL COME FURNISHED WITH BACK-PLATES

10. THE TRAFFIC SIGNAL CONTROLLERS SHALL BE ORIENTED WITH THE BACK OF THE CABINET TOWARD THE INTERSECTION SUCH THAT THE SIGNAL HEADS CAN BE VIEWED WHILE FACING THE CONTROLLER, UNLESS OTHERWISE DIRECTED BY THE PROJECT ENGINEER.

11. A #6 A.W.G. BARE COPPER GROUND WIRE SHALL BE INSTALLED IN ALL PVC CONDUITS THAT CARRY 120 VOLT SIGNAL CABLES. ALL STEEL CONDUIT, POLES, PEDESTALS, AND CONTROLLER CABINETS AT EACH INTERSECTION SHALL BE BONDED TO FORM A CONTINUOUS SYSTEM AND BE EFFECTIVELY GROUNDED. BONDING JUMPERS SHALL BE #6 A.W.G. BARE COPPER WIRE CONNECTED BY APPROVED CLAMPS.

12. THE CONTRACTOR SHALL COMPLETELY REMOVE ANY EXISTING SIGNAL POLE AND CONTROLLER FOOTINGS.

13. THE CONTRACTOR SHALL INSTALL ONE SIGNAL CABLE FROM EACH SIGNAL HEAD TO THE BASE OF THE POLE. A 5-CONDUCTOR CABLE SHALL BE USED FOR A 3-SECTION SIGNAL HEAD AND A 7-CONDUCTOR CABLE SHALL BE USED FOR EITHER A 4 OR 5 SECTION SIGNAL HEAD.

STAPLE DETAIL

GENERAL NOTES:

Details indicated hereon are for the installation of a temporary slope drain on the foreslope of the roadway fill. The intent of the temporary slope drain is to prevent foreslope erosion during construction and to minimize the water pollution which might be caused by soil erosion from the project.

At the completion of each day's grading, a temporary berm will be constructed on both sides of the subgrade. At points a maximum of 500' apart, at low points of vertical curves, and as determined by the Engineer, temporary intercepting wing dikes shall be graded and slope drains installed. All special grading work shall be considered incidental to other grading work on the project.

Foreslopes with a vertical height of ten feet or less shall not have temporary slope drains installed.

The temporary slope drain shall consist of a length of pipe capable of extending to the top of foreslope when all grading has been completed. The pipe shall be moved up the foreslope to the new temporary top of slope berm at the completion of each day's work. The pipe shall be Solid Tubing complying with all requirements of ASTM F 405, Standard Duty Tubing.

Method of measurement shall be along the centerline of pipe in its final position.

The price bid for "Temporary Slope Drain, As Per Plan", measured in lineal feet, shall be considered full compensation for the construction of all required temporary top of slope berms, for installing and maintaining the slope drain for the duration of the contract, and for removal of all material upon completion of the embankment.

① Typical length of 10.0', 1.0' minimum height

② Staple may be bent reinforcing bar No. 4 minimum, or alternate approved by the Engineer.

DETAILS OF CONCRETE PIPE CAP

CONCRETE PIPE CAP:

The use of an approved pipe cap is required when so indicated on the detail project plans. The dimensions of the pipe cap shall be such as to neatly fit the groove end of the appropriate size of pipe.

The cap must be precast and an approved bituminous joint material shall be placed between the cap and the pipe.

The Pipe Cap placement or removal shall not be paid for directly, but when specified, shall be considered to be incidental to other pipe work on the project.

1st Stage: Install Concrete Pipe Cap where specified.

2nd Stage: Remove Concrete Pipe Cap prior to connecting to existing pipes.

PLAN

ELEVATION

Install temporary barrier rail on a flat, level surface.
Lap the traffic-side face of guardrail in the direction of adjacent traffic.

Contract Item: Temporary to Permanent Barrier Connection

Item includes: 4 - 6'-3" Thrie-Beam Guardrail Sections
4 - BA-202 Terminal Connectors
48 - 5/8" dia. Guardrail Splice Bolts and Nuts
20 - 3/4" dia. Rail Anchor Bolts: Powers Fasteners Wedge-Bolt Anchor OR Red Head Large Diameter Tapcon OR Simpson Titen HD Screw Anchor

The number of Temporary to Permanent Barrier Connections will be counted. The Contractor will be paid the contract unit price for each Temporary to Permanent Barrier Connection measured as provided above.

(1) Install five (5) Rail Anchor Bolts in each Terminal Connector as shown. Ensure a minimum embedment depth of 6". Drill pilot holes with a core bit. Avoid drilling or cutting through reinforcing steel within TBR sections.

(2) Install thrie-beam sections so they are approximately centered on the gap between the TBR and the permanent barrier. Shift non-traffic-side thrie-beam sections 16" upstream or downstream in order to prevent anchor bolt interference.

(3) Each connection requires three (3) BA-401 stake anchors installed in each of the first 4 TBR sections adjacent to the bridge. Use of the strap anchorage with these 4 TBR sections is not allowed. The remainder of the TBR run may be anchored with either the stake anchors or the strap anchors.

Install temporary barrier rail on a flat, level surface. Removal of curb adjacent to bridge end posts may be necessary. Where anchored TBR sections are not located on existing pavement, construct a 3" minimum thickness HMA pad as shown. When required, removal of curb and construction of HMA pad shall be considered incidental to this contract item.

Upon removal of Temporary to Permanent Barrier Connection, use non-shrink grout complying with Materials I.M. 491.13 to fill any holes that were drilled for attachment of Terminal Connectors to median barrier.

Contract Item: Temporary to Permanent Barrier Connection

Item includes:

The number of Temporary to Permanent Barrier Connections will be counted. The Contractor will be paid the contract unit price for each Temporary to Permanent Barrier Connection measured as provided above.

(1) Install five (5) Rail Anchor Bolts in each Terminal Connector as shown. Ensure a minimum embedment depth of 6". Drill pilot holes with a core bit. Avoid drilling or cutting through reinforcing steel within temporary or permanent barriers.

(2) Shift opposite side thrie-beam sections 16" upstream in order to prevent anchor bolt interference.

(3) 32" mounting height preferred. 30" minimum.

(4) Install anchor bolts to secure Height Transition to barriers. Ensure a minimum embedment depth of 2".

(5) Each connection requires nine (9) BA-401 stake anchors as shown. Use of the strap anchor is not allowed.

GENERAL NOTES:

IT IS THE INTENT OF THESE PLANS TO CONSTRUCT A 261'-2 x VARIABLE HEIGHT REINFORCED CONCRETE RETAINING WALL WHICH TIES INTO AN EXISTING RETAINING WALL.

FAINT LINES ON PLANS INDICATE THE EXISTING STRUCTURE.

THE CITY AND UTILITY COMPANIES WHOSE FACILITIES ARE SHOWN ON THE PLANS OR KNOWN TO BE WITHIN THE CONSTRUCTION LIMITS SHALL BE NOTIFIED BY THE CONTRACTOR OF THE CONSTRUCTION STARTING DATE.

ALL EXPOSED CORNERS 90 DEGREES OR SHARPER SHALL BE FILLETED WITH A $\frac{3}{4}$" DRESSED AND BEVELED STRIP.

THE REINFORCEMENT SUPPLIED FOR THIS STRUCTURE SHALL BE GRADE 60. REINFORCING BAR CLEARANCES WILL BE AS FOLLOWS:
CAST AGAINST EARTH 3"
CONCRETE AGAINST FORMS 2"

CLASS 20 EXCAVATION MATERIAL UNSUITABLE FOR BACKFILLING SHALL BE DISPOSED OF IN A MANNER THAT WILL LEAVE THE SITE IN A NEAT CONDITION.

KEYWAY DIMENSIONS SHOWN ON THE PLANS ARE BASED ON NOMINAL DIMENSIONS UNLESS STATED OTHERWISE. IN ADDITION, THE BEVEL USED ON THE KEYWAY SHALL BE LIMITED TO A MAXIMUM OF 10 DEGREES FROM VERTICAL.

SEE TRAFFIC CONTROL PLAN ELSEWHERE IN THESE PLANS.

STRUCTURAL CONCRETE FOR THE FOOTING AND WALL SHALL BE CLASS "C".

ALL COSTS ASSOCIATED WITH EXPANSION AND CONSTRUCTION JOINTS SHALL BE CONSIDERED INCIDENTAL TO THE BID ITEM "STRUCTURAL CONCRETE (MISCELLANEOUS)."

BACKFILLING OPERATIONS SHALL BE IN ACCORDANCE WITH SECTION 2404.03, H OF THE STANDARD SPECIFICATIONS. SECTION 2403.03, N SHALL BE FOLLOWED WITH RESPECT TO SUBJECTING WALLS AND FOOTINGS TO EXTERIOR LOADS.

THESE BRIDGE PLANS LABEL ALL REINFORCING STEEL WITH ENGLISH NOTATION (5a) IS $\frac{5}{8}$ INCH DIAMETER BAR). ENGLISH REINFORCING STEEL RECEIVED IN THE FIELD MAY DISPLAY THE FOLLOWING "BAR DESIGNATION". THE "BAR DESIGNATION" IS THE STAMPED IMPRESSION ON THE REINFORCING BARS, AND IS EQUIVALENT TO THE BAR DIAMETER IN MILLIMETERS.

CONSTRUCTION OF CHAIN LINK FENCE ON CONCRETE RETAINING WALL SHALL BE IN CONFORMANCE WITH CURRENT STANDARD AND SUPPLEMENTAL SPECIFICATIONS. DETAILS SHOWN ON THE SHEET ARE TYPICAL. ALTERNATE DETAILS MAY BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.

ANCHOR BOLTS ($\frac{5}{8}$ DIAMETER) SHALL HAVE A MINIMUM PULL OUT STRENGTH OF 9000 POUNDS BASED ON 3500 PSI CONCRETE, SHALL MEET THE REQUIREMENTS OF I.D.O.T. MATERIALS I.M. 453.09, AND SHALL BE GALVANIZED AND INSTALLED ACCORDING TO RECOMMENDATIONS OF THE MANUFACTURER.

BASE PLATES SHALL BE GALVANIZED AFTER WELDING AND PRIOR TO INSTALLATION.

POST SIZE AND SPACING SHALL BE AS SHOWN ON MI-102.

BOTTOM TENSION WIRE, PLACEMENT OF STRETCHER BAR CLAMPS, FASTENING OF CHAIN LINK FABRIC TO POSTS, TOP RAIL SLEEVE, ETC., SHALL BE AS INDICATED ON MI-102.

GROUNDING REQUIREMENTS SHALL BE AS DETERMINED BY SECTION 2519 OF THE STANDARD SPECIFICATIONS.

CHAIN LINK FABRIC SHALL BE KNUCKLED SELVAGE AT TOP AND BOTTOM OF FENCE.

PRICE BID FOR "FENCE, CHAIN LINK, VINYL COATED" SHALL BE CONSIDERED FULL COMPENSATION FOR FABRICATION AND CONSTRUCTION OF FENCING AS DETAILED HEREON, AS REQUIRED BY PROJECT PLANS, AND AS PER SECTION 2519 OF THE STANDARD SPECIFICATIONS.

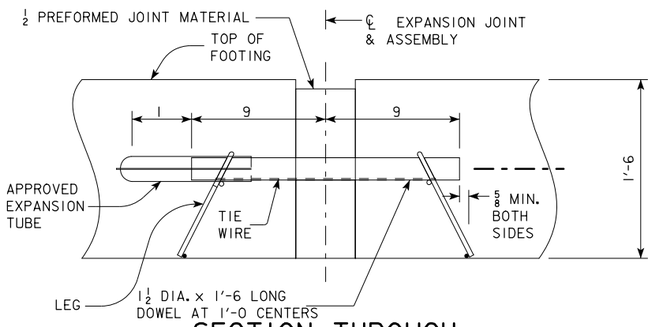
EXPANSION DOWEL NOTES:

EXPANSION DOWEL ARE REQUIRED AT EACH FOOTING EXPANSION JOINT.

ALL COST ASSOCIATED WITH EXPANSION DOWELS AND DOWEL SUPPORT ASSEMBLIES SHALL BE INCIDENTAL TO THE PRICE BID FOR "STRUCTURAL CONCRETE (MISCELLANEOUS)".

EXPANSION DOWEL BARS SHALL BE $1\frac{1}{2}$" DIAMETER, 18" LONG. CENTER TO CENTER SPACING OF DOWELS SHALL BE PARALLEL TO THE OTHER DOWELS IN THE ASSEMBLY WITHIN $\frac{1}{8}$". WHEN EXPANSION JOINT IS LOCATED BETWEEN FOOTINGS OF DIFFERENT SIZE, THE DOWEL SUPPORT ASSEMBLY SHALL BE SIZED FOR THE SMALLER FOOTING.



SECTION THROUGH FOOTING EXPANSION JOINT

EACH DOWEL BAR SHALL BE FITTED WITH APPROVED 6" LONG EXPANSION TUBE AT ONE END. EXPANSION TUBE SHALL BE POSITIONED TO PROVIDE 1" CLEAR SPACE FOR DOWEL MOVEMENT. THE EXPANSION SIDE OF THE DOWEL SHALL BE COATED TO PREVENT BOND WITH THE FOOTING. THE OPPOSITE SIDE OF THE DOWEL SHALL BE WELDED TO THE WIRE DOWEL SUPPORT ASSEMBLY. DOWEL BARS SHALL BE PLACED TO ALTERNATE FIXED ENDS AND EXPANSION TUBE ENDS ALONG THE LENGTH OF THE SUPPORT ASSEMBLY.

WIRE SIZES SHOWN ARE THE MINIMUM REQUIRED. WIRES SHALL HAVE A MINIMUM TENSILE STRENGTH OF 50 KSI. WELD ALTERNATELY THROUGHOUT.

DOWEL ASSEMBLY	
LABEL	MINIMUM WIRE SIZE
SIDE RAILS	#1/0 GAUGE (0.306 INCH DIA.)
LEG	#1/0 GAUGE (0.306 INCH DIA.)
TIE WIRE	#10 GAUGE (0.135 INCH DIA.)
RETAINER RAILS	0.250 INCH DIA.

CLIP AND REMOVE CENTER PORTION OF TIE WIRE DURING FIELD ASSEMBLY.
