General Information

Measurement units for this survey are US survey feet. This survey is to establish survey control and alignments of I80 and Middle Road. Along with a full DTM of portions of Middle Road, a partial DTM and photo control.

Project Control

The RTN position of reference station Davenport (IADA) was held fixed horizontally and vertically; Sabula (IASA) and ROC80 1A (AH3063) were held horizontally and RIC 040 (DP3512) was held vertically. Multiple 30-minute static observations were done on control points 1 through 4 as well as ROC80 1A and RIC 040.

A double run level loop was run through control points 1-4, 6-9 and benchmarks 501-509. The GPS derived elevations of control points 3 and 4 were held fixed. The estimated standard error of the observed height differences from the network adjustment was 0.0067 ft/mile. Five benchmarks from the 1965 plans I-80-8(19)305 were found and used on this project. The vertical datum in 1965 was not NAVD88. There is about an 8-foot difference in the vertical datums.

Alignments Information

The horizontal alignment for this survey is a retrace of the As Built Plans I-80-8(19)305 and I-80-8(18)301. The PI at Sta. 1260+21.20 was reset from the four concrete monument reference ties on plans I-80-8(19)305. This station was used to control the stationing of this project. A 5/8 inch rebar was found at PI 1159+12.3 on plans I-80-8(18)301, a 5/8 inch rebar was found at POT 1298+60.4 plans I-80-8(19)305. These monuments were used to control the forward and backward tangents. Several other monuments were found along these tangents. They varied from 0.04" to 0.14" left or right of the line. The Middle Road alignment was established by intersecting tangents.

CONTROL POINT VICINITY MAP

This map is a guide to the vicinity of the primary project control points. Primary control is for use with RTK base stations and for RTN validation. Future surveys will use primary project control to establish temporary control as needed for construction or other surveying applications.

SUBJECT:	**Access Review**		

PROJECT LOCATION AND DESCRIPTION:

This project is the reconstruction of the I-80/Middle Road interchange into a standard diamond interchange from a partial clover interchange. Middle Road is also being reconstructed to a 4-lane facility from a 2-lane.

ACCESS CATEGORY CLASSIFICATION:

I-80
Interstate/Freeway facilities provide for full access control with access allowed at interchanges.

ACCESS RIGHTS ACQUISITION:

Access rights were previously acquired from Sta. 212+00 to Sta. 238+50 on both sides as a part of project I-IG-80-8(14)300. Please note the stations do not quite line up with the new alignment, and that Sta. 238+50 is approximately 236+62 in the proposed project. The south side of the interchange appears to line up with Sta. 212+00 being the location of the Kwik Star RI/RO entrance.

150 feet of additional access rights will be acquired for both sides of Middle Road on the north side of the interchange from Sta. 236+62 to Sta. 238+12.

ADMINISTRATIVE RULES:

In accordance with Chapter 112.5(5)(f) *Interchange and intersection access control.,* "For any new interchange or interchange reconstruction, access rights should be acquired and extend a minimum of 600 feet away from the ramp bifurcation point. If the AADT will exceed 10,000 within 20 years, a minimum of 1,000 feet of access rights should be acquired."

(c) “When the interchange crossroad AADT will exceed 10,000 in the 20th year, the first full-movement access connection should be at least 1,320 feet as measured from the ramp bifurcation point. A minimum of 1,000 feet may be allowed for a full-movement intersection if there is a proven necessity and no reasonable alternative. A restrictive median may be required between the ramps and the full-movement intersection. If the first full-movement intersection is at least 1,200 feet from the ramp bifurcation and a restrictive median is present, a right-in and right-out access may be permitted at a minimum of 600 feet from the ramp bifurcation. The ramp functional area should not overlap with the functional area of any access connection.”

(d) “When the interchange crossroad AADT will be between 3,000 and 10,000 within 20 years, the first full movement should be at least 1,000 feet away from the ramp. All access types may have a restricted right-in and right-out access at a minimum of 600 feet from the ramp bifurcation point.”

ACCESS CONTROL LIMITS:

Side Road Middle Road

The AADT for Middle Road is expected to exceed 10,000 within 20 years on the south side of the interchange, but not for the north side. 1,000 feet of access rights will be required on the south side of the interchange and 600 feet of access rights will be required on the north side of the interchange. These distances will be measured from the ramp bifurcation point.

No access shall be allowed on Middle Road from Sta. 212+00 to Sta. 238+12.
