ATTENTION: Tony Lazarowicz, P.E. **PROJECT:** I-29/IA 141 Interchange
IMX-029-6(294)127--02-97

FROM: Bob Miller, P.E. PIN: 18-97-029-010

OFFICE: TranSystems Corp.

SUBJECT: Revised Project Concept Statement

This project includes reconstruction of the interchange at Interstate 29 and IA 141 near the City of Sloan. The interchange will provide 16'6" clearance over the existing I-29 pavement and modify the geometry to better conform to current design standards. Right-of-way acquisition will be required in the area of the ramp gores.

The concept includes reconstruction of the existing bridge (Maintenance No. 9700.0S141) with a construct a 222 feet x 40 feet pretensioned prestressed concrete beam bridge immediately north of the existing bridge.

A draft project concept report was submitted by TranSystems on May 14, 2019. Comments received during the review period have been considered and incorporated into the final concept report. The final concept report was submitted on May 28, 2019. The revised concept report was submitted on May 30, 2019.

The project cost estimate is $12,128,200. This project is currently programmed for construction in FY 2023.

May 30, 2019

I. STUDY AREA

A. Project Description

This project involves the replacement of the Iowa 141 bridge (Maint No. 9700.0S141) over I-29 in Woodbury County.

The preferred alternative is to construct a 222 feet x 40 feet pretensioned prestressed concrete beam bridge immediately north of the existing bridge. The bridge and IA 141 will be raised approximately 2 feet to provide the desirable clearance for interstate traffic. The new profile requires reconstruction of Iowa 141 for approximately 0.7 miles and reconstruction of the interchange ramps. This alternative requires right of way acquisition in the area of the ramp gores.

Additional alternatives were considered but were not pursued in this concept due to the inability to maintain traffic during construction. This alternative was a diamond interchange on existing horizontal alignment with an approximate two feet increased vertical clearance.

B. Need for Project

The 30 feet by 207 feet pretensioned prestressed concrete beam bridge was built in 1959 and overlaid with low-slump concrete in 1972. The top of deck was injected with epoxy in 1984 with additional injections since then. The bridge rails were retrofitted in 2008. The bridge is classified as structurally deficient due to the condition of the deck. Several AC and PC patches with large areas of delamination are located throughout the

top of the deck. The bottom of deck has large areas that are damp with cracking. The cracks have rust staining, stalactites, and heavy leaching.
Several prestressed beams have damage from impact and water infiltration. The beam ends have on-going deterioration. Due to the age of the structure, the poor condition of the deck, on-going prestressed beam deterioration, and low overhead bridge clearance (14 ft. 6 in.) a replacement structure should be designed.

The interchange geometry includes ramp terminal intersections at angles significantly sharper than current design guides of 60 degree minimum and 75 degree preferred. Existing ramp alignments include curve radii of 764 feet at eight percent superelevation. The ramps are shorter with acceleration/deceleration tapers of 630 feet and 500 feet respectively. Current design standards include minimums lengths of acceleration and deceleration of 1,000 feet. The ramp intersections with IA 141 are separated by over 1,000 feet and have unique channelized approaches at the intersections.

C. Present Facility

The existing structure is a 30 ft. x 207 ft. pretensioned prestressed concrete beam bridge constructed in 1959.

I-29 in the project area is a divided 4-lane facility, with two 12 foot wide traffic lanes in each direction, 10 feet outside and 6 feet inside paved shoulders and 4:1 foreslopes, constructed in 1959. The median in the project area is 74 feet centerline to centerline.

IA 141 in the project area is 24 feet wide asphalt surface over ten inches of concrete pavement with ten feet wide granular shoulders and 3:1 foreslopes. This section of IA 141 was constructed in 1958. The roadway surface continues to be paved both east and west of the interchange.

D. Traffic Estimates

The 2016 average daily traffic (ADT) estimate for I-29 is 15,400 vehicles with 27% trucks. The 2023 and 2043 ADT estimates on IA 141 (east of the interchange) are 4,100 vehicles per day with 13% trucks and 4,300 vehicles per day with 13% trucks. IA 141 terminates approximately ¼ mile west of I-29. IA 141 becomes 330th Street west side of the interchange and terminates approximately three miles west. The 2023 and 2043 ADT estimates on IA 141/330th Street (west of the interchange) are 1,270 vehicles per day with 3% trucks and 1,350 vehicles per day with 3% trucks.

E. Sufficiency Ratings

I-29 is classified as an "interstate" route and is a maintenance service level "A" road with a sufficiency rating of 10 in both the northbound and southbound lanes. The federal bridge sufficiency rating is 65.

F. Access Control

Access rights have previously been acquired for I-29. A review of the as-built interchange plans show that the current distance from the ramp baseline to the end of the Access Control line is greater than 700 feet west of the interchange. East of the interchange access control is greater than 600 feet on the south side of IA 141 and less than 100 feet north of IA 141.

These access control distances will increase with the proposed ramp geometrics to approximately 1,200 feet west of the interchange and a minimum of 500 feet east of the interchange.

Based on the Iowa Primary Highway Access Management Policy (2012), the land use west of the interchange is rural and the land use east of the interchange is considered a "built-up area". The minimum access control distance for rural areas is 600 feet and for built-up areas the desirable distance is 300 feet. Base on this criteria, access control guidelines will be met with the proposed geometry.

It should be noted there are three field entrances within the access control, west of the interchange. Two on the south side and one on the north side of IA 141.

G. Crash History

During the five-year study period from January 1, 2014 through December 31, 2018, there were eight crashes including, one personal injury crash (alcohol related), two possible injury crashes, and five crashes that caused personal property damage only. Two of the eight crashes were caused by failure to yield and two more were cross-over type crashes on IA 141. Three of the eight crashes occurred at the southbound ramp terminals caused by traffic entering or exiting the southbound ramps.

II. PROJECT CONCEPT

A. Feasible Alternative - Replace bridge and interchange ramps, realign IA 141

Replace the existing 30 feet x 207 feet prestressed concrete beam bridge on IA 141 with a two-span, 222 feet x 40 feet pretensioned, prestressed concrete beam bridge on a new

vertical and horizontal alignment. The typical cross section adjacent to the bridge will consist of a 24 foot wide paved roadway and eight foot effective shoulders (six foot paved and two foot granular). The foreslopes will be 6:1/3.5:1 between the ramp terminals and will transition to 3:1 beyond the ramp terminals in order to tie into the existing foreslopes.

The vertical alignment for this bridge will be raised approximately of 2 feet to meet minimum vertical clearance requirement of 16 feet six inches. The horizontal alignment will be shifted approximately 43 feet to the north to allow east-west traffic to be maintained through the interchange. IA 141 will be reconstructed for approximately 0.7 miles due to the new horizontal and vertical alignments. New bridge approaches will be constructed and the existing guardrail will be replaced with new guardrail. The shoulders will be paved twenty feet beyond the ends of the guardrail. Class 10 will be necessary to build the new ramps; the offset IA 141 alignment; and to construct the new guardrail blisters. Place macadam revetment for slope protection under the bridge. Bridge end drains will be constructed on all four quadrants of the bridge.

Interstate 29 will be used as constructed; however, high tension cable or guardrail will be installed in the median due to the location of the new bridge pier.

All interchange ramps will be reconstructed to modify the geometry to better conform to current design standards. Modification of the geometry also allows the existing ramps to be used in maintaining traffic during construction. The interchange configuration will be a standard diamond with 16 feet wide ramps and four feet inside and six feet outside paved shoulders.

The existing entrances on the west side of the interchange will need to be relocated to the west in order to be beyond the existing access control. These entrances are all field entrances which include two south of IA 141 and one north of IA 141.

It appears that the new ramps will require additional right-of-way in the gore areas.

Traffic will be maintained by staged construction, using the existing bridge and ramps while the new bridge and ramps are constructed. There will be a limited closure when the tie-in pavement is constructed. The contractor will provide access at all times for the businesses and other entrances on the east and west sides of the interchange.

The existing lighting will be removed and replaced at the ramp terminals. All signing for the interchange, mainline guide signs, logo signs and signing on IA 141 through the interchange will be replaced.

Erosion control, rural seeding, and fertilizing will be utilized on all disturbed areas.

Item	Estimated Cost
Bridge Costs	
New Bridge	$1,019,800
Bridge Removal	52,200
Mobilization - 10%	107,200
M & C - 20%	214,400
Bridge Total	**$1,393,600**
Roadway Costs	
Bridge Approaches	82,200
Removal of Pavement	420,000
PCC Pavement, 10”	2,000,000
Modified Subbase	262,100
Paved Shoulder (ramps)	380,000
Paved Shoulder (IA 141)	165,000
Class 10, Roadway and Borrow	2,800,000
Culverts/Culvert Extensions	155,400
Longitudinal subdrain and outlets	104,200
Steel Guardrail for 2-lane bridge (includes removal)	22,000
High Tension Cable Guardrail for median pier	7,700
Interchange lighting	50,000
Signing and Pavement Marking	90,000
Traffic Control - 5%	363,300
Mobilization - 5%	363,300
Subtotal	**$7,265,200**
Staging – 15%	1,089,800
M & C - 30%	2,179,600
Roadway Total	**$10,534,600**
Right of Way	**$200,000**
Project Total	**$12,128,200**

B. Detour Analysis

Traffic on I-29 will be maintained during construction except for short duration closures to accommodate bridge demolition and setting new beams. It is anticipated that these short duration closures of I-29 will occur at night and use ramps as detours. Shoulder and/or lane closures will be necessary for bridge and ramp construction.

Traffic on the ramps north of IA 141 will be maintained except for short term periods to allow for ramp construction staging. During the closure, traffic would utilize the I-29 interchange at Salix and K-45 (Old Highway 75). Further coordination with Woodbury County will be needed during design.

The ramps south of IA 141 (northbound exit, southbound entrance) will be closed during construction. During the closure, traffic would utilize the I-29 and E-24/K-42 interchange west of Whiting. Today, the K-45 and K-42 Monona County roads are in very poor condition, however there are planned County improvements that will be constructed prior to the I-29/IA 141 interchange project construction. These detour routes will need to be further investigated as the interchange design progresses through Field Exam and final design.

Traffic on IA 141 will be maintained via staged construction with traffic utilizing the existing bridge and pavement while the new bridge and pavement are constructed. Temporary connections will be constructed to allow IA 141 traffic access to the interchange.

C. Recommendations

It is recommended that the present structure and interchange be replaced as described.

D. Construction Sequence

It is anticipated that all work on this project will be awarded to one prime contractor.

E. Special Considerations

Right of Way will be required for this project.

Asbestos was found in the tar sealant in the joints of the concrete slope protection pads. The removal of the tar sealant on the concrete slope protection pads will be included as part of the project. Coordination with the Office of Location and Environment will be needed.

An environmental scan of the project area was completed in January 2019. The scan utilized information from publically available databases including GIS mapping data and agency websites. The accuracy of the environmental scan is limited to an in-house review and depends entirely upon information source quality.

The environmental scan indicated a potential for wetland impacts in the project area, particularly the southwest quadrant. A wetland delineation is recommended.

There is a Zone A floodplain in the southeast quadrant of the interchange. No Regulatory Floodway is present. If the floodplain is impacted, then coordination with the Iowa Department of Natural Resources (IDNR) and the Woodbury County Planning and Zoning Department will be needed.

A Section 404 Permit will be required.

No Historic or Cultural Resources are expected to be found in the project limits, however to comply with Iowa guidance a Section 106 clearance will be required.

The complete environmental scan is attached.

There are no sidewalks adjacent to I-29 or IA 141; therefore, no ADA work is planned in conjunction with this project.

F. Program Status

Site data has been developed by the Office of Design. This project is listed in the current Iowa Transportation Improvement Program for replacement in FY2023.

FIELD EXAM QUESTIONS

Drain tiles on farm fields? None found in survey.

Barrier protection for runaround where separation is 6' from new EOS to runaround EOP.

Constructability of ramp terminals at IA 141 in Stage 4. Would temporary barrier be required for the E.B. lane of IA 141?

Runarounds for IA 141 are a modified version of the detour connection standard PV-428. The 1000' reverse curves are being fit into a much narrower horizontal transition to fit within the overhead power poles on the east end of the project.

Runaround for east end of 141 is very close to overhead power poles. They could be protected with barrier and impact attenuators.

Truck stop/hotel will need access during construction of runaround. Should we include a new temporary entrance to the hotel parking lot in order to maintain access to the truck stop/hotel during the construction of the runaround? Or could the runaround with entrance be staged to maintain access. An option would be to utilize the existing entrance to the east. Would require pavement placement through existing gravel parking lot. This is private property.

Drainage analysis recommends increasing Ramp A pipe to 2 48" pipes and I-29 pipes to 6 30" pipes. If Ramp A pipes remain 30" headwater would rise but would not be a problem due to height of Ramp A grade. This would put the two pipes under I-29 at 30" (practical approach). Ramp B can remain 30" pipe.

Cross slope on I-29 access/decal lanes will match adjacent existing cross slope on I-29.

I. STUDY AREA

A. Project Description

This project involves the replacement of the Iowa 141 bridge (Maint No. 9700.0S141) over I-29 in Woodbury County.

The preferred alternative is to construct a 222 feet x 40 feet pretensioned prestressed concrete beam bridge immediately north of the existing bridge. The bridge and IA 141 will be raised approximately 2 feet to provide the desirable clearance for interstate traffic. The new profile requires reconstruction of Iowa 141 for approximately 0.7 miles and reconstruction of the interchange ramps. This alternative requires right of way acquisition in the area of the ramp gores.

Additional alternatives were considered but were not pursued in this concept due to the inability to maintain traffic during construction. This alternative was a diamond interchange on existing horizontal alignment with an approximate two feet increased vertical clearance.

B. Need for Project

The 30 feet by 207 feet pretensioned prestressed concrete beam bridge was built in 1959 and overlaid with low-slump concrete in 1972. The top of deck was injected with epoxy in 1984 with additional injections since then. The bridge rails were retrofitted in 2008. The bridge is classified as structurally deficient due to the condition of the deck. Several AC and PC patches with large areas of delamination are located throughout the

top of the deck. The bottom of deck has large areas that are damp with cracking. The cracks have rust staining, stalactites, and heavy leaching.
Several prestressed beams have damage from impact and water infiltration. The beam ends have on-going deterioration. Due to the age of the structure, the poor condition of the deck, on-going prestressed beam deterioration, and low overhead bridge clearance (14 ft. 6 in.) a replacement structure should be designed.

The interchange geometry includes ramp terminal intersections at angles significantly sharper than current design guides of 60 degree minimum and 75 degree preferred. Existing ramp alignments include curve radii of 764 feet at eight percent superelevation. The ramps are shorter with acceleration/deceleration tapers of 630 feet and 500 feet respectively. Current design standards include minimums lengths of acceleration and deceleration of 1,000 feet. The ramp intersections with IA 141 are separated by over 1,000 feet and have unique channelized approaches at the intersections.

C. Present Facility

The existing structure is a 30 ft. x 207 ft. pretensioned prestressed concrete beam bridge constructed in 1959.

I-29 in the project area is a divided 4-lane facility, with two 12 foot wide traffic lanes in each direction, 10 feet outside and 6 feet inside paved shoulders and 4:1 foreslopes, constructed in 1959. The median in the project area is 74 feet centerline to centerline.

IA 141 in the project area is 24 feet wide asphalt surface over ten inches of concrete pavement with ten feet wide granular shoulders and 3:1 foreslopes. This section of IA 141 was constructed in 1958. The roadway surface continues to be paved both east and west of the interchange.

D. Traffic Estimates

The 2016 average daily traffic (ADT) estimate for I-29 is 15,400 vehicles with 27% trucks. The 2023 and 2043 ADT estimates on IA 141 (east of the interchange) are 4,100 vehicles per day with 13% trucks and 4,300 vehicles per day with 13% trucks. IA 141 terminates approximately ¼ mile west of I-29. IA 141 becomes 330th Street west side of the interchange and terminates approximately three miles west. The 2023 and 2043 ADT estimates on IA 141/330th Street (west of the interchange) are 1,270 vehicles per day with 3% trucks and 1,350 vehicles per day with 3% trucks.

E. Sufficiency Ratings

I-29 is classified as an “interstate” route and is a maintenance service level “A” road with a sufficiency rating of 10 in both the northbound and southbound lanes. The federal bridge sufficiency rating is 65.

F. Access Control

Access rights have previously been acquired for I-29. A review of the as-built interchange plans show that the current distance from the ramp baseline to the end of the Access Control line is greater than 700 feet west of the interchange. East of the interchange access control is greater than 600 feet on the south side of IA 141 and less than 100 feet north of IA 141.

These access control distances will increase with the proposed ramp geometrics to approximately 1,200 feet west of the interchange and a minimum of 500 feet east of the interchange.

Based on the Iowa Primary Highway Access Management Policy (2012), the land use west of the interchange is rural and the land use east of the interchange is considered a “built-up area”. The minimum access control distance for rural areas is 600 feet and for built-up areas the desirable distance is 300 feet. Base on this criteria, access control guidelines will be met with the proposed geometry.

It should be noted there are three field entrances within the access control, west of the interchange. Two on the south side and one on the north side of IA 141.

G. Crash History

During the five-year study period from January 1, 2014 through December 31, 2018, there were eight crashes including, one personal injury crash (alcohol related), two possible injury crashes, and five crashes that caused personal property damage only. Two of the eight crashes were caused by failure to yield and two more were cross-over type crashes on IA 141. Three of the eight crashes occurred at the southbound ramp terminals caused by traffic entering or exiting the southbound ramps.

II. PROJECT CONCEPT

A. Feasible Alternative - Replace bridge and interchange ramps, realign IA 141

Replace the existing 30 feet x 207 feet prestressed concrete beam bridge on IA 141 with a two-span, 222 feet x 40 feet pretensioned, prestressed concrete beam bridge on a new

vertical and horizontal alignment. The typical cross section adjacent to the bridge will consist of a 24 foot wide paved roadway and eight foot effective shoulders (six foot paved and two foot granular). The foreslopes will be 6:1/3.5:1 between the ramp terminals and will transition to 3:1 beyond the ramp terminals in order to tie into the existing foreslopes.

The vertical alignment for this bridge will be raised approximately of 2 feet to meet minimum vertical clearance requirement of 16 feet six inches. The horizontal alignment will be shifted approximately 43 feet to the north to allow east-west traffic to be maintained through the interchange. IA 141 will be reconstructed for approximately 0.7 miles due to the new horizontal and vertical alignments. New bridge approaches will be constructed and the existing guardrail will be replaced with new guardrail. The shoulders will be paved twenty feet beyond the ends of the guardrail. Class 10 will be necessary to build the new ramps; the offset IA 141 alignment; and to construct the new guardrail blisters. Place macadam revetment for slope protection under the bridge. Bridge end drains will be constructed on all four quadrants of the bridge.

Interstate 29 will be used as constructed; however, high tension cable or guardrail will be installed in the median due to the location of the new bridge pier.

All interchange ramps will be reconstructed to modify the geometry to better conform to current design standards. Modification of the geometry also allows the existing ramps to be used in maintaining traffic during construction. The interchange configuration will be a standard diamond with 16 feet wide ramps and four feet inside and six feet outside paved shoulders.

The existing entrances on the west side of the interchange will need to be relocated to the west in order to be beyond the existing access control. These entrances are all field entrances which include two south of IA 141 and one north of IA 141.

It appears that the new ramps will require additional right-of-way in the gore areas.

Traffic will be maintained by staged construction, using the existing bridge and ramps while the new bridge and ramps are constructed. There will be a limited closure when the tie-in pavement is constructed. The contractor will provide access at all times for the businesses and other entrances on the east and west sides of the interchange.

The existing lighting will be removed and replaced at the ramp terminals. All signing for the interchange, mainline guide signs, logo signs and signing on IA 141 through the interchange will be replaced.

Erosion control, rural seeding, and fertilizing will be utilized on all disturbed areas.

Item	Estimated Cost
Bridge Costs	
New Bridge	$1,019,800
Bridge Removal	52,200
Mobilization - 10%	107,200
M & C - 20%	214,400
Bridge Total	**$1,393,600**
Roadway Costs	
Bridge Approaches	82,200
Removal of Pavement	420,000
PCC Pavement, 10”	2,000,000
Modified Subbase	262,100
Paved Shoulder (ramps)	380,000
Paved Shoulder (IA 141)	165,000
Class 10, Roadway and Borrow	2,800,000
Culverts/Culvert Extensions	155,400
Longitudinal subdrain and outlets	104,200
Steel Guardrail for 2-lane bridge (includes removal)	22,000
High Tension Cable Guardrail for median pier	7,700
Interchange lighting	50,000
Signing and Pavement Marking	90,000
Traffic Control - 5%	363,300
Mobilization - 5%	363,300
Subtotal	**$7,265,200**
Staging – 15%	1,089,800
M & C - 30%	2,179,600
Roadway Total	**$10,534,600**
Right of Way	**$200,000**
Project Total	**$12,128,200**

B. Detour Analysis

Traffic on I-29 will be maintained during construction except for short duration closures to accommodate bridge demolition and setting new beams. It is anticipated that these short duration closures of I-29 will occur at night and use ramps as detours. Shoulder and/or lane closures will be necessary for bridge and ramp construction.

Traffic on the ramps north of IA 141 will be maintained except for short term periods to allow for ramp construction staging. During the closure, traffic would utilize the I-29 interchange at Salix and K-45 (Old Highway 75). Further coordination with Woodbury County will be needed during design.

The ramps south of IA 141 (northbound exit, southbound entrance) will be closed during construction. During the closure, traffic would utilize the I-29 and E-24/K-42 interchange west of Whiting. Today, the K-45 and K-42 Monona County roads are in very poor condition, however there are planned County improvements that will be constructed prior to the I-29/IA 141 interchange project construction. These detour routes will need to be further investigated as the interchange design progresses through Field Exam and final design.

Traffic on IA 141 will be maintained via staged construction with traffic utilizing the existing bridge and pavement while the new bridge and pavement are constructed. Temporary connections will be constructed to allow IA 141 traffic access to the interchange.

C. Recommendations

It is recommended that the present structure and interchange be replaced as described.

D. Construction Sequence

It is anticipated that all work on this project will be awarded to one prime contractor.

E. Special Considerations

Right of Way will be required for this project.

Asbestos was found in the tar sealant in the joints of the concrete slope protection pads. The removal of the tar sealant on the concrete slope protection pads will be included as part of the project. Coordination with the Office of Location and Environment will be needed.

An environmental scan of the project area was completed in January 2019. The scan utilized information from publically available databases including GIS mapping data and agency websites. The accuracy of the environmental scan is limited to an in-house review and depends entirely upon information source quality.

The environmental scan indicated a potential for wetland impacts in the project area, particularly the southwest quadrant. A wetland delineation is recommended.

There is a Zone A floodplain in the southeast quadrant of the interchange. No Regulatory Floodway is present. If the floodplain is impacted, then coordination with the Iowa Department of Natural Resources (IDNR) and the Woodbury County Planning and Zoning Department will be needed.

A Section 404 Permit will be required.

No Historic or Cultural Resources are expected to be found in the project limits, however to comply with Iowa guidance a Section 106 clearance will be required.

The complete environmental scan is attached.

There are no sidewalks adjacent to I-29 or IA 141; therefore, no ADA work is planned in conjunction with this project.

F. Program Status

Site data has been developed by the Office of Design. This project is listed in the current Iowa Transportation Improvement Program for replacement in FY2023.

9" HMA Paved Shoulder at guardrail. 8" PCC may be substituted with the following jointing layout:

Match mainline pavement joint spacing. When mainline pavement is 8" or greater in thickness, place additional transverse 'C' joints in shoulder at mid-panel of the mainline pavement. Place longitudinal 'C' joint at P/2 from edge of mainline pavement when P is greater than 10' wide. Terminate longitudinal joint at transverse joint less than 10' in length.

Compaction of HMA is required to face of guardrail post. Hand compaction will be allowed under guardrail. Removal and reinstallation of guardrail will be allowed with no additional payment.

Refer to Tabulation 112-9 for shoulder quantities.

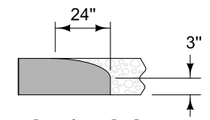
(1) For subgrade treatment, refer to other details in the plan.

(2) PCC option only: When guardrail posts are installed prior to construction of PCC paved shoulder, fasten form board to the face of guardrail posts for the length shown. Refer to note 4 for final 2 posts.

(3) Continue paved shoulder to existing paved shoulder or 20 feet beyond the center of the first post.

(4) Shoulder may be notched for final 2 posts or post sleeves may be installed through pavement. Do not drive posts through pavement.

(5) 'KT-1 joint for PCC shoulder.
'B' joint for HMA shoulder.



Section C-C
Roll down at granular shoulder or earth.

Paul Harry- Asst. Party Chief

Date(s) of Survey

Begin Date	7/30/2019
End Date	9/16/2019

General Information

Measurement units for this survey are US survey feet. This survey is for proposed removal and reconstruction of IA 141 interchange. This is a partial terrain and underground structure field survey with aerial image and lidar acquired terrain added in the Photogrammetry section of the Design Office.

Vertical Control

Vertical datum for this survey is NAVD88 (Computed using Geoid12b). GRS80 Ellipsoidal Height was computed at project Pts. 97K42001, 97141002, 97029003, R 181, J 129, SLOAN, and 8097 by doing concurrent 6 hour static observations. The project control is relative to nearby Iowa RTN Base Stations.

This survey observed 1 County GPS control with published NAVD88 heights to compare to local ground control:

Woodbury County GPS Network mark designated 8097 has a published Elev. of 1071.19
Survey Elev. = 1071.115

This survey observed 3 NGS GPS control with published NAVD88 heights to compare to local ground control:

NGS mark designated R 181 (PID NM1908) has a published Elev. of 1074.17

Horizontal Control

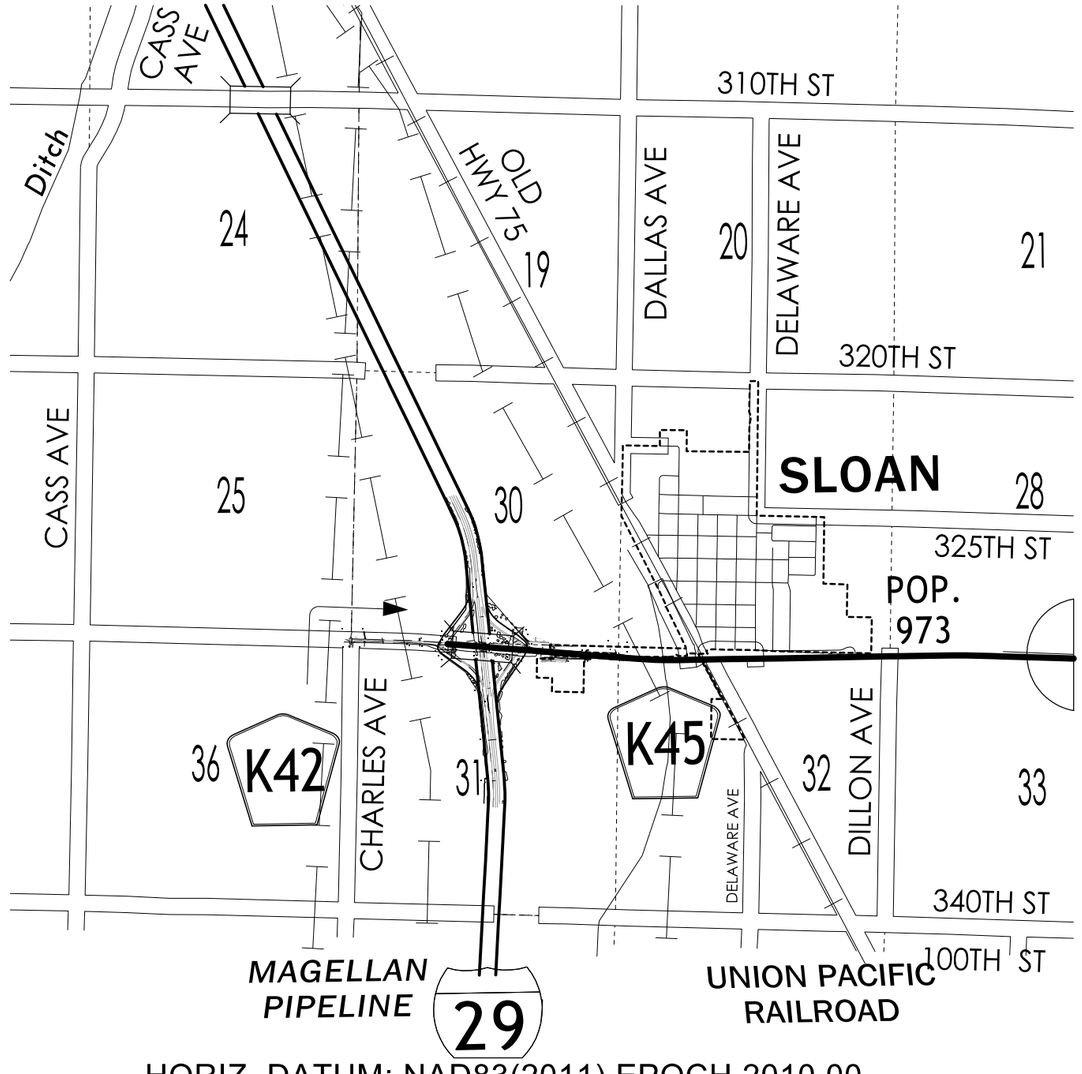
The project coordinate system for this survey is Iowa RCS Zone 4 (U.S. Survey Feet). This survey control is relative to IaRTN reference stations. IaRTN Reference Station coordinates are relative to the National Reference Station network datum: NAD83 (2011) for Epoch 2010.00. Coordinates were determined by conducting concurrent 6 hour static observations on Project Pts. 97K42001, 97141002, 97029003, R 181, J 129, SLOAN, and 8097.

Alignment Information

Horizontal alignment was provided by District 3.

CONTROL POINT VICINITY MAP

This map is a guide to the vicinity of the primary project control points
Primary control is for use with RTK base stations and for RTN validation.
Future surveys will use primary project control to establish temporary control as needed for construction or other surveying applications.



HORIZ. DATUM: NAD83(2011) EPOCH 2010.00
VERT. DATUM: NAVD88
Ia. Regional Coordinate System Zone 4

Coordinate listing from next sheet will be used with IaRTN for monument recovery. No other reference ties are given.

TRAFFIC CONTROL PLAN

1. All Traffic Control items shall be installed prior to contractor starting roadway work operations. Staging Traffic Control items shall be installed prior to beginning each stage's work. Items to be installed per the roadway plans, Standard Road Plan sheets, or as directed by the field engineer. Additional items may be necessary to accommodate field conditions. Contractor is responsible for field locate of utilities prior to installing TC items.
2. Lane Closure System, LCS, notifications shall be submitted and approved prior to related roadway work operations. "
3. Traffic Control shall be in accordance with Standard Road Plans. For additional information, refer to Part 6 of the Manual on the Uniform Traffic Control Devices and the current Standard and Supplemental Specifications.
4. Use Portable Dynamic Message Signs (PDMS) in conjunction with traffic control and detour signage per Standard Road Plan sheets; contractor shall provide PDMSs.
5. Traffic will be maintained on I-29 and IA 141 at all times.
6. Shoulder and/or lane closures (per Standard Road Plan TC-402, TC-418, and TC-420) will be necessary for all Stages of construction.
7. Ramps shall remain open and maintained except for short duration closures during Stages 3 and 4 (per Standard Road Plan TC-417) to complete ramp construction.
8. During ramp closures, I-29 traffic shall be detoured for duration of stages(see Sheets J.9 and J.10).
9. Demolition of existing structure and setting girders for new structure may require closure of I-29 for a short duration utilizing entrance/exit ramps. Install Traffic Control items per Standard Road Plan TC-454, using PDMSs to notify use of ramps, and the use of other items as directed by the field engineer to direct traffic accordingly.

111-01
04-17-12

COORDINATED OPERATIONS

Other work in progress during the same period of time will include the construction of the projects listed. Coordinate operations with those of other contractors working within the same area.

Project	Type of Work

108-26A
08-01-08

STAGING NOTES

Stage 1

Traffic:
- Maintain northbound/southbound traffic in existing lanes of I-29.
- Maintain eastbound/westbound traffic in existing lanes of IA 141.
- Refer to IowaDOT standard sheets TC-1 and TC-402 to install lane temporary pavement

Construction:
- Construct temporary pavement at ramp gores and Ramp D and IA 141 interchange terminal.
- Install drainage culvert(s) under runaround limits and at Ramp C temporary pavement section.
- Construct temporary pavement runarounds along IA 141 at either end of the project limits.
- Maintain access at hotel/truck stop parking lot driveway by constructing temporary pavement in halves/temporary alternate driveway.
- Install temporary barrier rail along I-29 median shoulders to protect work zone for substructure construction.

Stage 2

Traffic:
- Maintain I-29 ramp traffic utilizing temporary ramp gores and existing ramp pavement.
- Maintain eastbound/westbound IA 141 traffic along existing pavement and temporary runarounds.
- Coordinate I-29 northbound/southbound overnight shutdown for girder setting operations(use ramps to maintain traffic per Standard Roadway Plan TC-454).

Construction:
- Construct new alignment sections of Ramps A, B, C, and D that do not interfere with traffic along I-29 and IA 141.
- Construct IA 141 substructure and superstructure; set girders during allowed timeframe.
- Construction IA 141 from project limits except in areas of existing ramp terminals; do not impede traffic entering and exiting I-29.
- Install proposed culverts as necessary for drainage under proposed ramp sections; maintain drainage throughout stage.

Stage 3

Traffic:
- Maintain northbound/southbound traffic in existing lanes of I-29.
- Detour northbound I-29 entrance ramp(Ramp D) traffic and southbound I-29 exit ramp(Ramp A) traffic via the Salix and K-45 interchange(see 'Detour Plan' on Sheet J.9).
- Maintain northbound I-29 exit ramp(Ramp C) traffic and southbound I-29 entrance ramp(Ramp B) traffic utilizing temporary gore ramp and existing ramp pavement.
- Maintain eastbound/westbound IA 141 traffic along existing pavement and temporary runarounds.

Construction:
- Construct remaining sections of Ramp A and D during ramp closures; complete ramp/I-29 shoulder construction at gores.
- Construct remaining ramp terminal sections along IA 141.

Stage 4

Traffic:
- Maintain northbound/southbound traffic in existing lanes of I-29.
- Detour northbound I-29 exit ramp(Ramp C) traffic and southbound I-29 entrance ramp(Ramp B) traffic via the Whiting and K-42 interchange(see 'Detour Plan' on Sheet J.10).
- Maintain northbound I-29 entrance ramp(Ramp D) traffic and southbound I-29 exit ramp(Ramp A) traffic utilizing newly constructed pavement from Stage 2 and 3.
- Maintain eastbound/westbound IA 141 traffic along new pavement completed in Stages 2 and 3.

Construction:
- Construct remaining sections of Ramp B and C during ramp closures; complete ramp/I-29 shoulder construction at gores.
- Construct remaining ramp terminal sections along IA 141.
- Remove remaining portions of IA 141 and Ramps A, B, C, and D.
- Remove runarounds at IA 141 project limits and reconstruct driveways, ditches, etc.

Other Staging Considerations

Traffic/Construction:
- Contractor will need to drop the existing structure at some point during construction operations(maybe during Stage 3 and Stage 4 dropping the structure in halves when off ramps are closed and portion of traffic is detour anyways?).
