Concept Statement - Final

I-80 HMA Widening/Resurfacing and PCC Reconstruction

Dallas County
Project No.: IM-NHS-080-3(282)118--03-25
PIN: 18-25-080-020-01
ROUTE: I-80 from Grand Prairie Parkway to 60th Street

Prepared by HDR
For Iowa Department of Transportation
District 4

Date: June 3, 2020

I. PROJECT DESCRIPTION AND HISTORY

A. Project Description

This project involves replacement of the bridges over the Union Pacific Railroad (UPRR) west of Jordan Creek Parkway. The bridges and approximately 1500 ft. of I-80 will be reconstructed to an 8-lane section to accommodate future capacity expansion projects but will be striped for 6 lanes of traffic. I-80 HMA widening and resurfacing would gap this area.

This project will also include HMA widening and resurfacing I-80 from 4 basic lanes to 6 basic lanes from the east side of the Grand Prairie Parkway interchange to 60th Street. The widening will be accommodated on I-80 to the outside of the existing lanes.

Grand Prairie Parkway, Jordan Creek Parkway, and 60th Street interchanges will be used as constructed, with reconstruction/widening limited to the I-80 ramp connections to accommodate the pavement widening. Acceleration and deceleration lanes at the 3 interchanges will also be provided as part of the HMA widening improvements.

B. Need for Project

Existing I-80 in the project area includes two basic lanes in each direction. The existing dual bridges over the UPRR were built in 1966. The bridges have been overlaid once and a second overlay is not feasible. A deck replacement is not recommended due to the age and condition of the substructures. It is recommended the bridges be replaced as a result of their deteriorating conditions. The existing PCC

pavement was placed in 1988, and the eastbound lanes were overlaid in 2000. Rehabilitation work is proposed to address continuing deterioration of both eastbound and westbound lanes. The project area has rapidly growing traffic demands on I-80 west of Des Moines. Widening to six lanes is recommended to provide interim safety and capacity improvements along this segment until further improvements are constructed in the area in conjunction with the I-80/35/235 southwest systems interchange reconstruction (currently planned to be complete by 2035).

II. EXISTING CONDITIONS

A. Present Facility

This segment of I-80 from Grand Prairie Parkway to 60th Street is 3.75 miles in length (approx. MP 118.66 to MP 122.41)

The existing 11.5 in. PCC pavement was placed in 1988-1989.

From Grand Prairie Parkway to Jordan Creek Parkway the pavement is 26 ft. wide with 6 ft. and 10 ft. wide by 8 in. HMA shoulders, and has a 50 ft. wide median.

From Jordan Creek Parkway to 60th Street the pavement is 24 ft. wide with 12 ft. wide auxiliary lanes, and 6 ft. and 10 ft. wide by 8 in. HMA shoulders, and has a 40 ft. wide median.

The I-80 eastbound Lanes from Grand Prairie Parkway to east of Jordan Creek Parkway were resurfaced with 4 in. HMA in 2000.

The existing dual 160 ft. by 39 ft. continuous welded girder bridges over the UPRR were constructed in 1966.

B. Traffic Estimates

TRAFFIC:

GRAND PRAIRIE PARKWAY TO JORDAN CREEK PARKWAY

2020: 54,100 VPD, 18% trucks

2045: 100,300 VPD, 18% trucks

JORDAN CREEK PARKWAY TO 60TH STREET

2020: 93,700 VPD, 12% trucks

2045: 149,400 VPD, 12% trucks

C. Existing Crash Analysis

Existing crash analysis was performed for the I-80 mainline segments within the area of influence. Crashes were analyzed for the five-year period 2014-2018, using the crash

data obtained from the Iowa DOT Open Data portal, under the crash data segment, and supported with the Iowa Crash Analysis Tool (ICAT).

During the 2014-2018 analysis period, there was a total of 305 crashes. During this period, there were 2 fatal crashes 3 major injury crashes and 26 minor injury crashes along the corridor. In total, about ten percent of all crashes resulted in an injury, with about ninety percent of crashes being either a possible/unknown injury crash, or a property damage only crash. The crashes were almost equally split between a single vehicle and multi-vehicle crashes. Additionally, there was no trend as to the location regarding crash severity.

A summary of mainline segment total crashes and crash rates for the study period is provided in the table below. Two segments exceeded the statewide crash average. These were the segments west of Grand Prairie Parkway and between the Grand Prairie Parkway ramps.

Existing Conditions Mainline Segment Crash Rates

Location	Length (miles)	ADT[1]	Number of Crashes (2014-2018)	Crashes/ 100 MVM[2]	Statewide Average Crashes/100 MVM[3]
West of Grand Prairie Parkway	0.55	44500	56	**125.5**	51 (Rural)
Grand Prairie Parkway Exit to Entry	1.01	40000	64	**86.9**	51 (Rural)
Grand Prairie Parkway to Jordan Creek Parkway	1.89	47200	94	57.6	101 (Municipal)
Jordan Creek Parkway Exit to Entry	0.72	43000	38	67.11	101 (Municipal)
Jordan Creek Parkway to 60th Street	0.25	84200	23	59.42	101 (Municipal)
60th Street Exit to I-35/80/235 West Junction	0.77	80900	30	26.52	101 (Municipal)

Source: HDR, based on crash data within the project area of influence from 2014-2018 provided by Iowa DOT Open Data portal and ICAT, April 7, 2020.

1 Year 2017 Annual Daily Traffic, Iowa DOT, Iowa Traffic Data – Average Traffic Volume.

2 MVM – Million Vehicle Miles. Cells highlighted pink indicate calculated crash rate exceeding the statewide average.

3 Iowa DOT Office of Traffic and Safety, April 7, 2020, Crash Rates and Crash Densities in Iowa by Road System 5- year Averages: 2012-2016, Category: Rural and Municipal Interstate.

A summary of the top five manner of crash and cause of crash for mainline segments within the area of influence are provided in the following tables.

Manner of Crash for Mainline Crashes – Top 5

Manner of Crash	Number of Crashes
Non-collision (single vehicle)	157
Rear-end (front to rear)	77
Sideswipe	50
Not Reported	10
Other (explain in narrative)	7
Total Crashes	**301**

Source: HDR, based on crash data within the project area of influence from 2014-2018 provided by Iowa DOT Open Portal Crash Data, April 7, 2020.

Cause of Crash for Mainline Crashes – Top 5

Cause of Crash	Number of Crashes
Driving too fast for conditions	49
Animal	39
Followed too close	38
Ran off road – straight	31
Ran off road – left	28
Total Crashes	**185**

Source: HDR, based on crash data within the project area of influence from 2014-2018 provided by Iowa DOT Open Portal Crash Data, April 7, 2020.

III. ALTERNATIVE ANALYSIS

A. Design Criteria

Design Criteria Worksheets were developed for I-80 Urban & Rural 6-lane, and Urban 8-lane sections. Worksheets were also developed for the ramps at Grand Prairie Parkway, Jordan Creek Parkway and 60th Street. The existing geometrics of I-80 meet the 70 mph design criteria.

B. Design Aspects NOT Considered in the Alternative

Existing ramp terminal intersections will be used as constructed.
Ashworth Road will be replaced by the City of West Des Moines to span the proposed widened section.

IV. PROPOSED ALTERNATIVE

A. Proposed Alternative

This proposed improvement will increase the existing 4 basic lanes to 6 basic lanes. The additional HMA lanes will be added on the outside along with new full width shoulder. The inside shoulder will be replaced and widened to 12 ft. to accommodate staging traffic. The existing pavement will receive an HMA overlay.

The existing bridges over the UPRR will be replaced with a 264 ft. X 84.5 ft. BTC Beam westbound bridge and a 264 ft. by 78.5 ft. BTC Beam eastbound bridge, with approximately 1500 ft. of PCC approach pavement. The bridges and approximately 1500 ft. of I-80 will be reconstructed to an 8-lane section and striped for 6 lanes of traffic. I-80 HMA widening and resurfacing would gap this area.

Grand Prairie Parkway, Jordan Creek Parkway, and 60th Street interchanges will be used as constructed, with reconstruction/widening limited to the I-80 ramp connections to accommodate the lane widening.

Acceleration and deceleration lanes at the 3 interchanges will also be provided as part of the HMA widening improvements.

Proposed Typical Sections

The typical section from Grand Prairie Parkway to west of the UPRR and east of UPRR to Jordan Creek Parkway, includes 6 lanes with 10 ft. of widening on the outside to provide 3 - 12 ft. wide basic lanes. Also includes 12 ft. inside and outside shoulders and a 50 ft. depressed median. Auxiliary lanes, where provided, will be 12 ft. wide with 6 ft. outside shoulder. Existing pavement will be resurfaced with an HMA overlay.

From Jordan Creek Parkway to 60th Street includes 6 lanes with 12 ft. of widening on the outside to provide 3 12 ft. wide basic lanes. Also includes 12 ft. inside and outside shoulders and a 40 ft. depressed median. Auxiliary lanes where provided will be 12 ft. wide with 6 ft. outside shoulder. Existing pavement will be resurfaced with an HMA overlay.

The typical section at the UPRR includes 8 lanes with 12 ft. inside and outside shoulders and a 34 ft. closed median with concrete barrier rail. Auxiliary lanes where provided will be 12 ft. wide with 6 ft. outside shoulder.

Ramp Improvements

Existing ramp reconstruction will be limited to what is required to meet horizontal and

vertical geometry criteria due to widening on I-80.

Drainage

Existing culverts will be reviewed for condition and capacity with acceptable structures extended. Open ditches will be used for most of project, with storm sewer in the median of the 8 lane section and between the WB lanes and the NB to SB entrance ramp at Jordan Creek Parkway Interchange.

Side Slopes

Proposed side slopes will be placed at 10:1 for 4 ft. then 6:1/3.5:1 barn roof section. Slopes steeper than 3.5:1 within the clear zone will be protected with cable guardrail or concrete barrier rail.

B. Cost Estimate

Item	Price / Unit[1]	Quantity	Unit	Cost
Full Depth Pavement	$102.24	139563	SY	$14,268,921.12
HMA Overlay 3"	$147.88	11579	TON	$1,712,302.52
Subdrain	$5.30	28168	LF	$149,290.40
WB bridge	$3,026,862.00	1	LS	$3,026,862.00
EB bridge	$2,810,989.00	1	LS	$2,810,989.00
Steel Overhead Sign Truss, 90 ft. Span	$79,375.00	2	LS	$158,750.00
Steel Overhead Sign Truss, 80 ft. Span	$77,305.00	1	LS	$77,305.00
Steel Overhead Sign Truss, 70 ft. Span	$72,830.00	1	LS	$72,830.00
Cantilever Truss, 40 ft	$57,214.00	1	LS	$57,214.00
Signs	$100,000	1	LS	$100,000
			Subtotal:	$22,434,464.04
Traffic Control	5%			$1,121,723.20
Staged Construction	10%			$2,243,446.40
Mobilization	10%			$2,243,446.40
Contingency	30%			$6,730,339.21
			Total:	$34,773,419.26
[1]Price based on Bidx/IPDWeb average prices, where applicable.				

C. Staging / Construction Sequence

Two lanes of traffic will be maintained in each direction during construction. The pavement widening areas will be constructed using lane shifts and temporary barrier rail (TBR). For the UPRR bridge and reconstruction area, construction will be phased to construct inside first, then alternate outside construction with lane shifts and TBR. Ramp traffic will be maintained using lane shifts and TBR.

Night work will be required during construction in order to keep two lanes open in each direction during the day.

D. Special Considerations

Utilize existing Right of Way where possible. However, it is anticipated that some Right of Way acquisition will be required.
Agreement with the UPRR will be required.

E. Program Status

Project is being considered for addition to the update of the Statewide Transportation Improvement Program with construction in FY 2023 and 2024.

Date(s) of Survey

Begin Date	11/19/2018
End Date	03/16/2020

General Information

Measurement units for this survey are US survey feet. This survey is for the preliminary design for the section of I-80 from west of the US 6/US 169 Interchange to east of Jordan Creek Pkwy in West Des Moines. Project datum and control information is provided by Design Survey Office. This project is a Partial DTM with Photo control. This survey request was for the I-80 corridor only. Project horizontal datum is NAD83 (2011), Iowa RCS Zone 8 (Ames – Des Moines).

Vertical Control

Vertical datum for this survey is relative to NAVD88 (computed using Geoid12B for the 2019 new FENOs, FENO 1-8, and in 2020 Geoid18 used for FENOs 9-10 for derived orthometric elevations listed). This survey consisted of observing 10 new FENO 1-meter rod monuments using minimum 2hr initial static observations along with data from 3 Iowa RTN CORS sites: Des Moines (IADM), De Soto (IADS), and Martensdale (IAMD).

Additionally, 10 local existing GPS monuments with published NAVD88 elevations were observed and used that are located in proximity to the I-80 corridor area: Dallas County GPS points G104, G114, G115, and G116; City of West Des Moines Benchmark point 032; Three existing FENOs supplied by the DOT (set by others) and NGS BM A162:

Dallas County GPS Pt G104 has a published Elv of: 915.493 usft
Survey Elv = 915.49 usft

Dallas County GPS Pt G114 has a published Elv of 959.402 usft
Survey Elv = 959.40 usft

Dallas County GPS Pt G115 has a published Elv of 1017.98 usft
Survey Elv = 1017.98 usft

Dallas County GPS Pt G116 has a published Elv of 875.76 usft
Survey Elv = 875.64 usft

GPS Pt A162 has a published Elv of 1095.82 usft
Survey Elv = 1095.82 usft

GPS Pt 25002 has a published Elv of 957.79 usft
Survey Elv = 957.79 usft

GPS Pt 25003 has a published Elv of 925.96 usft
Survey Elv = 925.96 usft

GPS Pt 25005 has a published Elv of 1007.86 usft
Survey Elv = 1007.86 usft

GPS Pt GPS9 has a published Elv of 938.993 usft
Survey Elv = 938.91 usft

City of West Des Moines BM WDM032 has a published Elv of 996.30 usft
Survey Elv = 996.30 usft

The final vertical adjustment results show standard deviations were less than 0.02 ft. at 95% confidence level (2 sigma) for the new FENO monuments.

Horizontal Control

The project coordinate system for this survey is NAD83 (2011) Iowa RCS Zone 8 (Ames – Des Moines) US survey feet. This survey control is relative to IaRTN reference stations. IaRTN Reference Station coordinates are relative to the National Reference Station network datum: NAD83 (2011) for Epoch 2010.00. Coordinates were determined by observing each mark for 120 minutes minimum for the first observation and 35 minutes minimum for the second observation with appropriate time spans between each session.

For the February 2020 survey portion which added FENO monuments FENO9 and FENO10, the same three IaRTN CORS stations were utilized as well as HARN station GPS 9. FENO8 was re-observed as part of the establishment of the two new FENO markers to complete out the survey project control network.

The horizontal standard deviation of these adjusted observations was less than 0.02 ft. at 95% confidence level (2 sigma).

Alignment Information

The horizontal alignment for this survey is a retrace of As-built Plans No. I-80-3(14)109, I-80-3(15)113, I-80-3(20)121. Survey stationing was equated to the plan PI at STA 606+22.0 and run back and ahead throughout the survey.

Survey stationing relates to as built plan stationing as follows:

PI STA 606+22.0 As-built Plans Project No. I-80-3(14)109
Survey PI STA 606+22.0

PI STA 783+24.4 As-built Plans Project No. I-80-3(15)113

PI STA 1243+30.0 As-built Plans Project No. I-80-3(20)121
Survey PI STA 1242+99.94

CONTROL POINT VICINITY MAP

This map is a guide to the vicinity of the primary project control points
Primary control is for use with RTK base stations and for RTN validation.
Future surveys will use primary project control to establish temporary control as needed for construction or other surveying applications.
