PLANS OF PROPOSED IMPROVEMENT ON THE

PRIMARY ROAD SYSTEM

LINN COUNTY

GRADING

U.S. 30 MT. VERNON / LISBON BYPASS
FROM IOWA HIGHWAY 1 TO SPRING CREEK

SCALES: As Noted

Refer to the Proposal Form for list of applicable specifications.

Value Engineering Saves. Refer to Article 1105.14 of the Specifications.

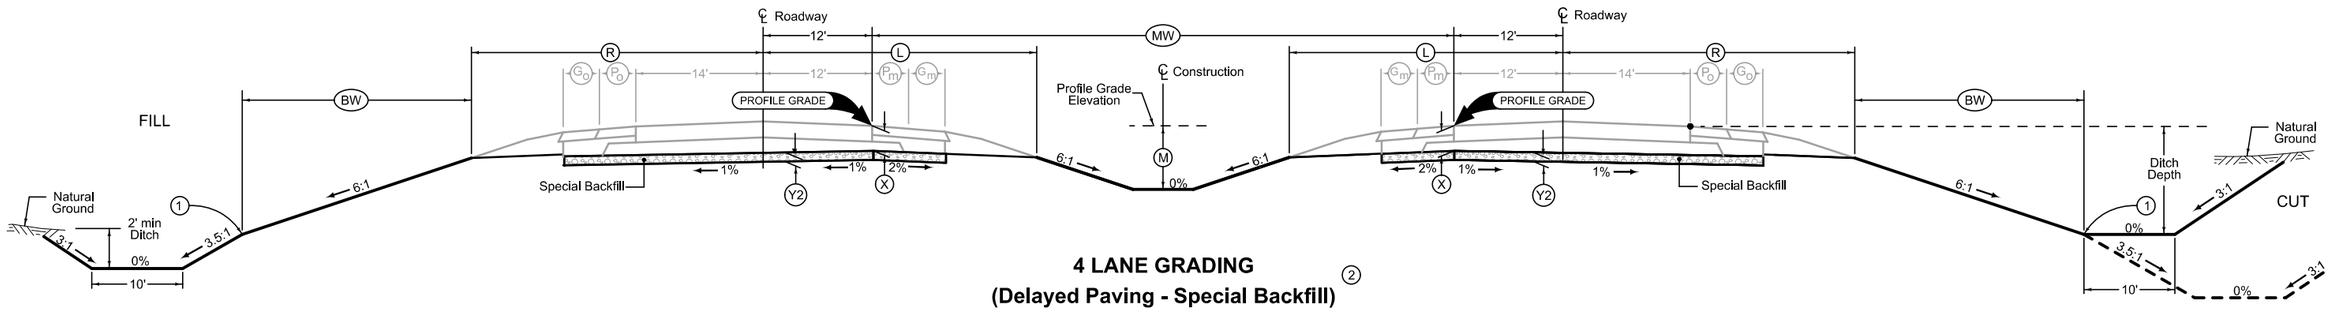
4 LANE GRADING
(Delayed Paving - Select Soil) (4)



4 LANE GRADING
(Delayed Paving - Special Backfill) (2)
(Optional)

Normal section shown may be modified appropriately in areas of superelevated curves or other locations specifically designated by the Engineer.

See Plan & Profiles sheets and cross sections for additional details of ditches and backslopes.

Quantity calculations based on Select Soil.

(1) Refer to project plan and cross sections for specific location of foreslope change.

(2) See Detail 'A"

(3) Excavate a portion of subgrade as necessary to provide drainage for the treatment. The additional excavation and Special Backfill for outlets is incidental and will not be paid for separately.

(4) Compaction with Moisture Control for Select Soil is incidental and will not be paid for separately. Maintain moisture content within limits specified in Tab. 103-6.

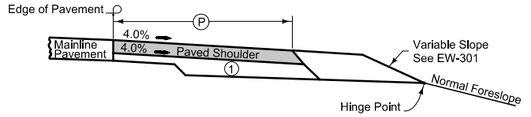
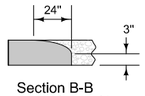
Typical Section with Form Board



Section A-A



Section B-B
Roll down at granular shoulder or earth.

6" HMA Paved Shoulder at guardrail. 7" PCC may be substituted with the following jointing layout:

Match mainline pavement joint spacing. When mainline pavement is 8" or greater in thickness, place additional transverse 'C' joints in shoulder at mid-panel of the mainline pavement. Place longitudinal 'C' joint at W/2 from edge of mainline pavement when W is greater than 10' wide. Terminate longitudinal joint at transverse joint less than 10' in length.

Compaction of HMA is required to face of guardrail post. Hand compaction will be allowed under guardrail. Removal & reinstallation of guardrail will be allowed with no additional payment.

Refer to Shoulder tabulation (112-9) for quantities.

1. 6" subgrade treatment.
2. When guardrail posts are installed prior to construction of paved shoulder, nail 1" x 6" untreated form boards along the face of guardrail posts for the length shown. This board is to prevent shoulder material from contacting the sides of the posts and altering the function of the guardrail. Form board not required for final 2 posts.
3. Continue paved shoulder to existing paved shoulder or 20' beyond the end of guardrail.
4. Shoulder may be notched for final 2 posts or post sleeves may be installed through pavement.
5. 'KT-1' joint for PCC shoulder.
   'B' joint for HMA shoulder.

ESTIMATE REFERENCE INFORMATION

Item No.	Item Code	Description
1	2101-0850001	CLEARING AND GRUBBING
		Clear and grub within construction limits, to the west bank of Spring Creek. Refer to Tab 110-17 for specific locations. Parcel 46 will have 4 inch tall stumps for removal.
2	2102-0425070	SPECIAL BACKFILL
		Refer to Tab 112-9 for locations.
3	2102-2200000	INTERCEPTING DITCHES AND FLUMES
		Refer to Tab. 100-16 for locations.
4	2102-2624980	CONTRACTOR FURNISH SELECT TREATMENT
		Refer to Tab. 103-11 for locations.
5	2102-2710070	EXCAVATION, CLASS 10, ROADWAY AND BORROW
		Refer to T sheets for additional information. Quantity includes 1,303,593 CY cut and 1,049,578 CY fill+30%.
		Excess 254,015 CY excavation shall become property of the Contractor to be wasted off-site.
6	2102-2710090	EXCAVATION, CLASS 10, WASTE
		Refer to T Sheets for locations and quantities.
10	2107-0425020	COMPACTING BACKFILL ADJACENT TO BRIDGES, CULVERTS, OR STRUCTURES
		Refer to Tab. 104-4 for locations and quantities. Quantities based on cast-in-place option.
12	2115-0100000	MODIFIED SUBBASE
		Refer to Tab. 100-25 for locations.
11	2107-0875100	COMPACTION WITH MOISTURE CONTROL
		Refer to Sheet CS.1 for additional information.
13	2122-5500060	PAVED SHOULDERS, HMA, 6 INCH
14	2123-7450020	EARTH SHOULDER FINISHING
		Refer to Tab. 112-9 for locations and quantities.
15	2303-1042500	HMA HT BASE COURSE, 1/2 INCH
16	2303-1042500	HMA HT INTERMEDIATE COURSE, 1/2 INCH
17	2303-1043500	HMA HT SURFACE COURSE, 1/2 INCH, NO FRICTION
18	2303-1258284	ASPHALT BINDER, PG 58-28H
		Refer to Tab. 100-25 for locations and additional information. Quantities have been increased 5% for overruns.
		Binder rate estimated at 6%.
19	2303-9093010	HMA, DRIVEWAY
		Refer to Tab. 102-3 for location and additional information.
20	2307-0025005	AGGREGATE, ROADWAY COVER, 1/2 INCH
21	2307-0600454	BINDER BITUMEN, CRS-2
		For application on the Sutliff Access. Aggregate application assumed at 30 lb / SY. Prime roadway base prior to application of surface treatment.
22	2312-8260051	GRANULAR SURFACING ON ROAD, CLASS A CRUSHED STONE
		Quantity includes 1,810.1 TON for Standing Rock Road and 1,004.7 TON for Green Ridge Road.
23	2315-8275025	SURFACING, DRIVEWAY, CLASS A CRUSHED STONE
		Refer to Tab. 102-3 for locations and quantities.
24	2402-0425040	FLOODED BACKFILL
		Refer to Tabs 104-3 and 104-4 for quantities.
25	2402-2720100	EXCAVATION, CLASS 20, FOR ROADWAY PIPE CULVERT
		Refer to Tab. 104-3 for quantities.
53	2502-8212034	SUBDRAIN, LONGITUDINAL, SHOULDER, 4 INCH
54	2502-8221304	SUBDRAIN OUTLET, DR-304
		Refer to Tab. 104-9, Sheet CS.1 for locations.
55	2505-4008130	REMOVAL OF CABLE GUARDRAIL
		Refer to Tab. 110-7B for locations.

100-4A
10-29-02

ESTIMATE REFERENCE INFORMATION

Item No.	Item Code	Description
56	2505-4008300	STEEL BEAM GUARDRAIL
57	2505-4008400	STEEL BEAM GUARDRAIL BARRIER TRANSITION SECTION
58	2505-4021010	STEEL BEAM GUARDRAIL END ANCHOR, BOLTED
59	2505-4021700	STEEL BEAM GUARDRAIL END TERMINAL
		Refer to Tab. 108-8A for locations and additional information.
60	2507-3250005	ENGINEERING FABRIC
61	2507-6800061	REVETMENT, CLASS E
62	2507-8029000	EROSION STONE
		Refer to Tab. 100-23 for locations and quantities.
63	2510-6745850	REMOVAL OF PAVEMENT
		Refer to Tab. 110-1 for locations.
64	2515-6745600	REMOVAL OF PAVED DRIVEWAY
		Refer to Tab. 110-8 for locations.
65	2518-6910000	SAFETY CLOSURE
		Refer to Tab. 108-13A for locations.
69	2527-9263109	PAINTED PAVEMENT MARKINGS, WATERBORNE OR SOLVENT-BASED
		Refer to Tab. 108-22 for locations.
73	2601-2636015	NATIVE GRASS SEEDING
		Included for all areas 8 feet or further from the U.S. 30 outside edge of shoulder.
74	2601-2636041	SEEDING AND FERTILIZING
		Included for all areas closer than 8 feet from the U.S. 30 outside edge of shoulder, the U.S. 30 median, and all side roads.
75	2601-2640350	SPECIAL DITCH CONTROL, WOOD EXCELSIOR MAT
		Refer to Tab. 100-22 for locations.
76	2601-2642100	STABILIZING CROP - SEEDING AND FERTILIZING
		Included for non-permanent seeding and disturbed areas as directed by the Engineer.
77	2601-2643110	WATERING FOR SOD, SPECIAL DITCH CONTROL, OR SLOPE PROTECTION
		Estimate based on four waterings of the Special Ditch Control at a rate of 50 gallons per square.
79	2602-0000020	SILT FENCE
		Refer to Tab. 100-17. The tabulation includes estimated locations for placement of silt fence to address possible erosion during construction. Verify the specific locations with the Engineer prior to beginning placement. Bid item includes 25% additional quantity for field adjustments and replacements.
80	2602-0000030	SILT FENCE FOR DITCH CHECKS
		Refer to Tab. 100-18. The tabulation includes estimated locations for placement of Silt Fence for Ditch Checks to address possible erosion during construction. Verify the specific locations prior to beginning placement.
		Bid item includes 50% additional quantity for field adjustments and replacements.
81	2602-0000050	SILT BASIN
		Refer to Tab. 100-14. The tabulation includes estimated locations for placement of silt basins to address possible erosion during construction. Verify the specific locations wit the Engineer prior to beginning placement. Bid item includes 100% additional quantity for field adjustments and maintenance.
82	2602-0000071	REMOVAL OF SILT FENCE OR SILT FENCE FOR DITCH CHECKS
		This item is included for silt fence or ditch check removal required for staging reasons, removal to allow for replacement (replacement to be paid separately), or for areas that have achieved 70% permanent growth.
83	2602-0000101	MAINTENANCE OF SILT FENCE OR SILT FENCE FOR DITCH CHECKS
		This item is included for clean-out and repair of the silt fence and ditch checks during the grading project.
84	2602-0000160	ROCK CHECK DAM
		Refer to Tab. 100-32 for locations and additional information. Length is measured along the top of the check dam from roadway foreslope to ditch backslope.
85	2602-0000312	PERIMETER SLOPE AND SEDIMENT CONTROL DEVICE, 12 INCH
86	2602-0000320	PERIMETER SLOPE AND SEDIMENT CONTROL DEVICE, 20 INCH
		Refer to Tab. 100-19 for locations.

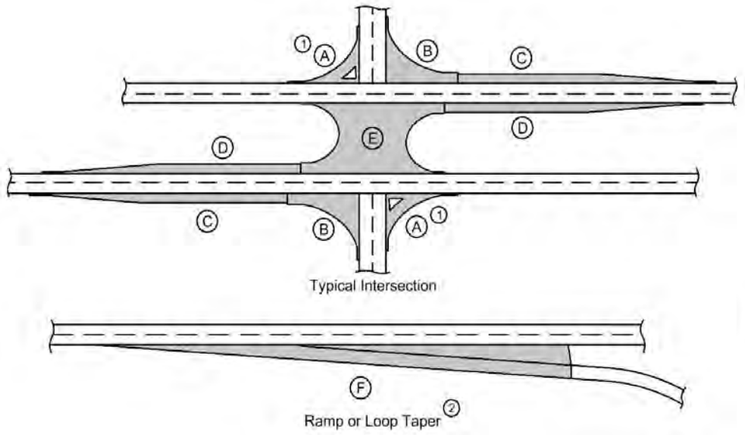
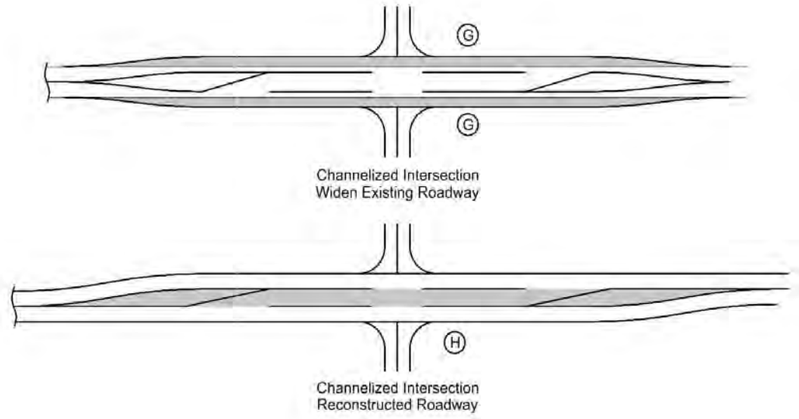
HMA PAVEMENT





(1) Does not include raised island area or curb. Refer to tabulation 112-4 for quantities.

(2) Refer to PV-410, PV-411, PV-412, and PV-414.

(3) Quantity includes Pavement Header.

Calculations assume a surface course unit weight (lbs/cf) of 145, an intermediate course unit weight (lbs/cf) of 145, a base course unit weight (lbs/cf) of 145, and a special backfill unit weight (lbs/cf) of 140.

SHOULDERS

(1) Lane(s) to which the shoulder is adjacent.
(2) Bid Item
(3) Applies only for Paved Shoulders constructed on project with existing granular shoulders.
(4) Does not include shrink.

Calculations assume a HMA unit weight (lbs/cf) of 145, a Special Backfill unit weight (lbs/cf) of 140, and a Granular Shoulder unit weight (lbs/cf) of 140.

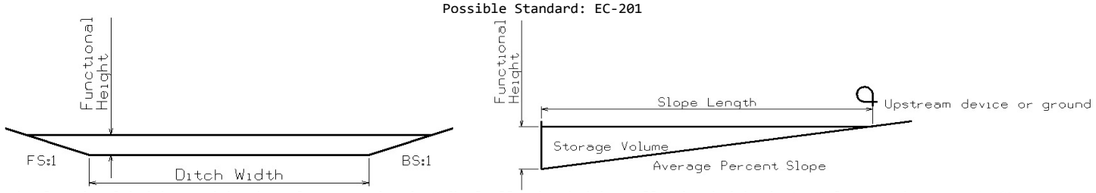
SILT FENCES FOR DITCH CHECKS

Possible Standard: EC-201



* The functional height used in the volume equation is 85% of effective height. Effective height is 1.58 feet as shown on EC-201.

* Volume equation: [0.5*Spacing*(0.5*H^2*FS+DW*H+0.5*H^2*BS)]

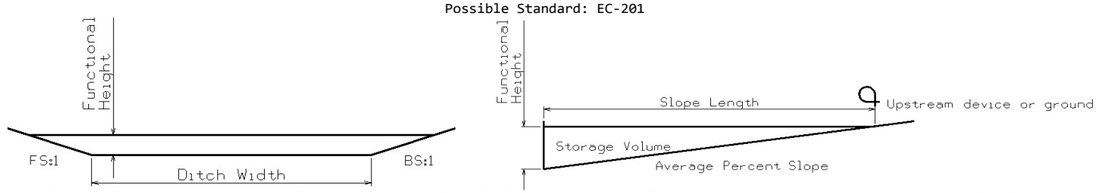
SILT FENCES FOR DITCH CHECKS

Possible Standard: EC-201



* The functional height used in the volume equation is 85% of effective height. Effective height is 1.58 feet as shown on EC-201.

* Volume equation: [0.5*Spacing*(0.5*H^2*FS+DW*H+0.5*H^2*BS)]

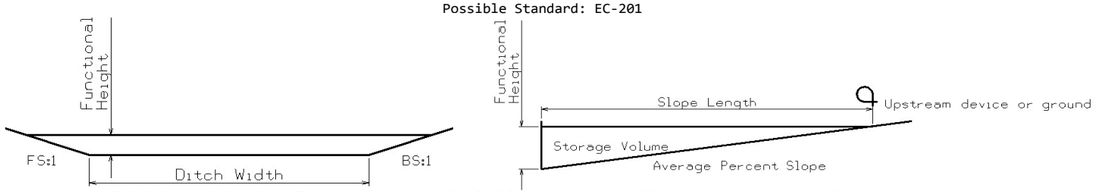
SILT FENCES FOR DITCH CHECKS

Possible Standard: EC-201



* The functional height used in the volume equation is 85% of effective height. Effective height is 1.58 feet as shown on EC-201.

* Volume equation: $[0.5*Spacing*(0.5*H^2*FS+DW*H+0.5*H^2*BS)]$

POLLUTION PREVENTION PLAN

This project is regulated by the requirements of the Iowa Department of Natural Resources (DNR) National Pollutant Discharge Elimination System (NPDES) General Permit No. 2 OR an Iowa Department of Natural Resources (DNR) National Pollutant Discharge Elimination System (NPDES) individual storm water permit. The Contractor shall carry out the terms and conditions of this permit and the Pollution Prevention Plan (PPP).

This Base PPP includes information on Roles and Responsibilities, Project Site Description, Controls, Maintenance Procedures, Inspection Requirements, Non-Storm Water Controls, Potential Sources of Off Right-of-Way Pollution, and Definitions. This plan references other documents rather than repeating the information contained in the documents. A copy of this Base Pollution Prevention Plan, amended as needed per plan revisions or by contract modification, will be readily available for review.

All contractors shall conduct their operations in a manner that controls pollutants, minimizes erosion, and prevents sediments from entering waters of the state and leaving the highway right-of-way. The prime contractor shall be responsible for compliance and implementation of the PPP for their entire contract. This responsibility shall be further shared with subcontractors whose work is a source of potential pollution as defined in this PPP.

I. ROLES AND RESPONSIBILITES
- A. Designer:
  1. Prepares Base PPP included in the project plan.
  2. Prepares Notice of Intent (NOI) submitted to Iowa DNR.
  3. Signature authority on the Base PPP and NOI.
- B. Contractor/Subcontractor:
  1. Affected contractors/subcontractors are co-permittees with the IDOT and will sign a certification statement adhering to the requirements of the NPDES permit and this PPP plan. Affected contractors/subcontractors are anyone responsible for sediment or erosion controls or involved in land disturbing activities. All co-permittees are legally required under the Clean Water Act and the Iowa Administrative Code to ensure compliance with the terms and conditions of this PPP.
  2. Submit an Erosion Control Implementation Plan (ECIP) according to Specifications Section 2602 and any additional plan notes.
  3. Install and maintain appropriate controls.
  4. Supervise and implement good housekeeping practices.
  5. Conduct joint required inspections of the site with inspection staff.
  6. Comply with training and certification requirements of Specifications Section 2602.
  7. Signature authority on Co-Permittee Certification Statements and storm water inspection reports.
- C. RCE/Inspector:
  1. Update PPP whenever there is a change in design, construction, operation or maintenance, which has a significant effect on the discharge of pollutants from the project.
  2. Maintain an up-to-date record that identifies contractors and subcontractors as co-permittees.
  3. Make these plans available to the DNR upon their request.
  4. Conduct joint required inspections of the site with the contractor/subcontractor.
  5. Complete an inspection report after each inspection.
  6. Signature authority on storm water inspection reports and Notice of Discontinuation (NOD).

II. PROJECT SITE DESCRIPTION
- A. This Pollution Prevention Plan (PPP) is for the construction of the U.S. 30 Mt. Vernon / Lisbon bypass (central segment).
- B. This PPP covers approximately 181 acres with an estimated 141 acres being disturbed. The portion of the PPP covered by this contract has 141 acres disturbed.
- C. The PPP is located in an area of Tama-Colo-Ely and Fayette-Downs-Chelsea soil associations. The estimated average SCS runoff curve number for this PPP after completion will be 78.
- D. Storm Water Site Map - Multiple sources of information comprise the base storm water site map including:
  1. Drainage patterns – Plan and Profile sheets and Situation plans.
  2. Proposed Slopes – Cross Sections.
  3. Areas of Soil Disturbance – construction limits shown on Plan and Profile sheets.
  4. Location of Structural Controls – Tabulations on C sheets.
  5. Locations of Non-structural Controls – Tabulations on C sheets.
  6. Locations of Stabilization Practices – generally within construction limits shown on Plan and Profile sheets.
  7. Surface Waters (including wetlands) – Project Location Map and Plan and Profile sheets.
  8. Locations where storm water is discharged – Plan and Profile sheets.
- E. The base site map is amended by contract modifications and progress payments (fieldbook entries) of completed erosion control work. Also, due to project phasing, erosion and sediment controls shown on project plans may not be installed until needed, based on site conditions. For example, silt fence ditch checks will typically not be installed until the ditch has been installed. Installed locations may also be modified from tabulation locations by field staff. Installed locations will be documented by fieldbook entries.
- F. Runoff from this work will flow into roadway ditches and unnamed tributaries to Spring Creek and the Cedar River.

III. CONTROLS
- A. The contractor's ECIP specified in Article 2602.03 for accomplishment of storm water controls should clearly describe the intended sequence of major activities and for each activity define the control measure and the timing during the construction process that the measure will be implemented.
- B. Preserve vegetation in areas not needed for construction.
- C. Sections 2601 and 2602 of the Standard Specifications define requirements to implement erosion and sediment control measures. Actual quantities used and installed locations may vary from the Base PPP and amendment of the plan will be documented via fieldbook entries or by contract modification. Additional erosion and sediment control items may be required as determined by the inspector and/or contractor during storm water monitoring inspections. If the work involved is not applicable to any contract items, the work will be paid for according to Article 1109.03 paragraph B.
  1. EROSION AND SEDIMENT CONTROLS
     a. Stabilization Practices
        1) Site plans will ensure that existing vegetation or natural buffers are preserved where attainable and disturbed portions of the site will be stabilized.
        2) Stabilization practices shall be initiated as soon as practicable in portions of the site where construction activities have temporarily or permanently ceased.
        3) Temporary stabilizing seeding shall be completed as the disturbed areas are constructed. If construction activity is not planned to occur in a disturbed area for at least 21 days, the area shall be stabilized by temporary seeding or mulching within 14 days.
        4) Permanent and Temporary Stabilization practices to be used for this project are located in the Estimated Project Quantities (100-0A, 100-1A, or 100-1C) and Estimate Reference Information (100-4A) located on the C sheets of the plan. Typical drawings detailing construction of the practices to be used on this project are referenced in the Standard Road Plans Tabulation.

POLLUTION PREVENTION PLAN

5) Preservation of existing vegetation within right-of-way or easements will act as vegetative buffer strips.
6) Preservation of topsoil: Bid items to be used for this project are located in the Estimated Project Quantities (100-0A, 100-1A, or 100-1C) and Estimate Reference Information (100-4A) located on the C sheets of the plan. Additional information may be found in Tabulations in the C or T sheets of the plans or is referenced in Standard Specifications Section 2105.

b. Structural Practices
1) Structural practices will be implemented to divert flows from exposed soils and detain or otherwise limit runoff and the discharge of pollutants from exposed areas of the site. Additionally, structural practices may include: silt basins that provide 3600 cubic feet of storage per acre drained or equivalent sediment controls, outlet structures that withdraw water from surface when discharging basins, and controls to direct storm water to vegetated areas.
2) Structural practices to be used for this project are located in the Estimated Project Quantities (100-0A, 100-1A, or 100-1C) and Estimate Reference Information (100-4A) located on the C sheets of the plan, as well as all other item specific Tabulations. Typical drawings detailing construction of the devices to be used on this project can be found on the B sheets of the plans or are referenced in the Standard Road Plans Tabulation.

c. Storm Water Management
1) Measures shall be installed during the construction process to control pollutants in storm water discharges that will occur after construction operations have been completed. This may include velocity dissipation devices at discharge locations and along length of outfall channel as necessary to provide a non-erosion velocity flow from structure to water course. If included with this project, these items are located in the Estimated Project Quantities (100-0A, 100-1A, or 100-1C) and Estimate Reference Information (100-4A) located on the C sheets of the plan, as well as all other item specific Tabulations. Typical drawings detailing construction of the practices to be used on this project are referenced in the Standard Road Plans Tabulation. The installation of these devices may be subject to Section 404 of the Clean Water Act.

2. OTHER CONTROLS
a. Contractor disposal of unused construction materials and construction material wastes shall comply with applicable state and local waste disposal, sanitary sewer, or septic system regulations. In the event of a conflict with other governmental laws, rules and regulations, the more restrictive laws, rules or regulations shall apply.
1) Vehicle Entrances and Exits - Construct and maintain entrances and exits to prevent tracking of sediments onto roadways.
2) Material Delivery, Storage and Use - Implement practices to prevent discharge of construction materials during delivery, storage, and use.
3) Stockpile Management - Install controls to reduce or eliminate pollution of storm water from stockpiles of soil and paving.
4) Waste Disposal - Do not discharge any materials, including building materials, into waters of the state, except as authorized by a Section 404 permit.
5) Spill Prevention and Control - Implement procedures to contain and clean-up spills and prevent material discharges to the storm drain system and waters of the state.
6) Concrete Residuals and Washout Wastes - Designate temporary concrete washout facilities for rinsing out concrete trucks. Provide directions to truck drivers where designated washout facilities are located. Designated washout areas should be located at least 50 feet away from storm drains, streams or other water bodies. Care should be taken to ensure these facilities do not overflow during storm events.
7) Concrete Grooving/Grinding Slurry – Do not discharge slurry to a waterbody or storm drain. Slurry may be applied on foreslopes or removed from the project.
8) Vehicle and Equipment Storage and Maintenance Areas - Perform on site fueling and maintenance in accordance with all environment laws such as proper storage of onside fuels and proper disposal of used engine oil or other fluids on site. Employ washing practices that prevent contamination of surface and ground water from wash water.
9) Litter Management - Ensure employees properly dispose of litter.
10) Dewatering – Properly treat water to remove suspended sediment before it re-enters a waterbody or discharges off-site. Measures are also to be taken to prevent scour erosion at dewatering discharge point.

3. APPROVED STATE OR LOCAL PLANS
During the course of this construction, it is possible that situations will arise where unknown materials will be encountered. When such situations are encountered, they will be handled according to all federal, state, and local regulations in effect at the time.

IV. MAINTENANCE PROCEDURES
The contractor is required to maintain all temporary erosion and sediment control measures in proper working order, including cleaning, repairing, or replacing them throughout the contract period. This shall begin when the features have lost 50% of their capacity.

V. INSPECTION REQUIREMENTS
A. Inspections shall be made jointly by the contractor and the contracting authority at least once every seven calendar days. Storm water monitoring inspections will include:
1. Date of the inspection.
2. Summary of the scope of the inspection.
3. Name and qualifications of the personnel making the inspection.
5. Review erosion and sediment control measures within disturbed areas for the effectiveness in preventing impacts to receiving waters.
6. Major observations related to the implementation of the PPP.
7. Identify corrective actions required to maintain or modify erosion and sediment control measures.
B. Include storm water monitoring inspection reports in the Amended PPP. Incorporate any additional erosion and sediment control measures determined as a result of the inspection. Immediately begin corrective actions on all deficiencies found within 3 calendar days of the inspection.

VI. NON-STORM WATER DISCHARGES
This includes subsurface drains (i.e. longitudinal and standard subdrains) and slope drains. The velocity of the discharge from these features may be controlled by the use of patio blocks, Class A stone, erosion stone or other appropriate materials. This also includes uncontaminated groundwater from dewatering operations, which will be controlled as discussed in Section III of the PPP.

VII. POTENTIAL SOURCES OF OFF RIGHT-OF-WAY (ROW) POLLUTION
Silts, sediment, and other forms of pollution may be transported onto highway right-of-way (ROW) as a result of a storm event. Potential sources of pollution located outside highway ROW are beyond the control of this PPP. Pollution within highway ROW will be conveyed and controlled per this PPP.

VIII. DEFINITIONS
A. Base PPP - Initial Pollution Prevention Plan.
B. Amended PPP - May include Plan Revisions or Contract Modifications for new items, storm water monitoring inspection reports, and fieldbook entries made by the inspector.

110-12A
10-18-16

POLLUTION PREVENTION PLAN

C. IDR - Inspector's Daily Report – this contains the inspector's daily diary and bid item postings.
D. Controls - Methods, practices, or measures to minimize or prevent erosion, control sedimentation, control storm water, or minimize contaminants from other types of waste or materials. Also called Best Management Practices (BMPs).
E. Signature Authority - Representative from Designer, Contractor/Subcontractor, or RCE/Inspector authorized to sign various storm water documents.

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

SPECIAL ATTENTION (SLIVER FILL)

Special attention should be given to Article 107.03.C, of the current Standard Specification Series, on this project.

EMBANKMENT WITH MOISTURE CONTROL

Moisture content shall be within the limits of minus _2__ and plus __2_ percentage points of Optimum Moisture Content for maximum density within the area described and listed below.

Moisture Control is required for all Class 10 fill placed in all locations and depths. Stability berms placed outside the normal foreslope template and topsoil will not require Moisture Control.

Moisture Control is also required on all select subgrade treatments.

Survey Information

General Information

Measurement units for this survey are US survey feet. This survey was performed for the design of the Mt. Vernon / Lisbon By-Pass project in Linn and Cedar County. Project horizontal and vertical datums were provided from the Design Survey Office based upon the 2001 Mt. Vernon/ Lisbon By-pass project. This survey is a Full Field Survey.

At the time of the survey, three alignments (A, E and F) for the new road were being considered. Survey was performed for all three alternate routes. Because of this, some of the stationing normally found in the sur file, pink sheets, etc. is incomplete and/or subject to change. It is expected that in December 2012 an alignment will be chosen and at that time, necessary station data will be updated accordingly.

Horizontal Control

The project coordinate system used was the same as that used on preliminary survey project on the Mt. Vernon-Lisbon bypass and U. S. 30 in Cedar and Clinton Counties. The survey coordinate system for this project is Modified Iowa State Plane South Zone in U.S Survey Feet units. State plane coordinates were modified to remove grid to ground distortion by scaling about point G083 by a factor of 1.000020987. The coordinates of G083 are N=694668.52 E=2319361.99. The datum is NAD83(1996-HARN).

Vertical Control

Vertical datum for this survey is relative to NAVD88. Geoid 09. US Survey feet.

The survey control is relative to IaRTN reference stations. Multiple Iowa RTN observations were completed on CP315. After review of these observations, the shots were averaged to establish the site BM elevation. A level run was then completed through project control points and benchmarks. The error was allowable and the error was distributed proportionately among the project monuments.

Vertical equations are as follows:

Datum Benchmark
BM #1 this survey Elevation = 888.678 NAVD 88
BM #25A Project #366(6) Elevation = 888.18
Found IHC plug on top of RCBC headwall.

Datum Benchmark
BM #2 this survey Elevation = 887.369 NAVD 88
BM #24C Project #366(6) Elevation = 885.24
Found IHC plug on top of northwest barrier wall of bridge over the South Raccoon River.

Alignment Information

At the time of the survey, three alignments (A, E and F) for the new road were being considered. Survey was performed for all three alternate routes. Because of this, some of the alignments and stationing normally found in the sur file, pink sheets, etc. is incomplete and/or subject to change. It is expected that in December 2012 an alignment will be chosen and at that time, necessary station data will be updated accordingly.

TRAFFIC CONTROL PLAN

1. Existing U.S. 30 will remain open to traffic at all times. No lane or shoulder closures are anticipated.The U.S. 30 bypass will be closed to traffic throughout construction.

2. Iowa 1 will remain open to traffic at all times. Shoulder closures as necessary for construction will be per Standard Road Plan TC-202.

3. Standing Rock Road will be closed to traffic at the bypass for the duration of construction. Maintain access at Sta. 7775+77 LT at all times; will require staged construction of Standing Rock Road north of that location.

4. Sutliff Road and Green Ridge Road will be closed to traffic during construction. Refer to Staging notes for additional information.

5. A detour will be established for Sutliff Road during construction. Refer to Sheet J.X for detour information.

6. Refer to the TC- series of Standard Road plans for traffic control layouts and additional information.

111-01
04-17-12

COORDINATED OPERATIONS

Other work in progress during the same period of time will include the construction of the projects listed. Coordinate operations with those of other contractors working within the same area.

Project	Type of Work
NHSX-030-7(120)--3H-57	Grading
NHSX-030-7(189)--3H-57	Grading

NHSX-030-7(186)--3H-57	RCB, New Single Box

108-26A
08-01-08

STAGING NOTES

Contractor may revise project staging with approval of the Engineer. Access south of the bypass will be available throughout construction via Iowa 1 or Adams Avenue (east of Lisbon).

Standing Rock Road Staging
Standing Rock Road will be closed at the bypass throughout construction. Stage construct Standing Rock Road north of the bypass to maintain access to the residence at Sta. 7775+77 LT. Generally, it is assumed that this would include delaying removal of existing roadway north of the bypass until proposed roadway is complete. Temporary granular surfacing as necessary will be paid for with existing bid items.

Sutliff Road Staging
Sutliff Road will be closed at the bypass throughout construction regardless of staging.

Stage 1: Close existing Sutliff Road from Sta. 8804+75 to EOP. Access across dam will be available via existing entrance. Gap construction of bypass from Sta. 809+00 to 811+50.
- Grade Sutliff Road in closure area. Pave from Sta. 8809+39 to EOP.
- Construct Sutliff Pond Entrance.
- Construct both bridge abutments.

Stage 2: Close Sutliff Road south of Sta. 8809+39. Access across dam will be available via Sutliff Pond Entrance.
- Construct bypass through area gapped during Stage 1.
- Grade Sutliff south of Sta. 8804+75. Stage construction (1/2-at-a-time assumed) south of Sta. 8791+50 to maintain access to quarry.

Stage 3: Sutliff remains closed Sta. 8791+50 to Sta. 8804+75
- Sutliff bridge is constructed by others.
- Upon completion of bridge and approaches, pave remainder of Sutliff Road.

Green Ridge Road Staging
Green Ridge Road will be closed at the bypass throughout construction. Stage construct Green Ridge Road south of the bypass to maintain access to the residence at Sta. 10836+31 RT. Generally, it is assumed that this would include delaying removal of existing roadway south of the bypass until proposed roadway is complete. Temporary granular surfacing as necessary will be paid for with existing bid items.

STORM SEWER

* Bid Item
** For SW-545

For bedding and backfill purposes under Primary roads, use material complying with Article 4120.04 (Class A Crushed Stone) of the Standard Specifications for all bedding and backfill. Place and compact the material according to Article 2435.03, A and Article 2552.03, E (Class I materials).

INTAKES AND UTILITY ACCESSES

PIPES

Design Length, Slope, and Flowlines are calculated from inside wall to inside wall along CL of pipe. An additional 6 ft length is added to Design Length to account for estimated length to center of structures.

BERM SLOPE ELEVATIONS REFLECT THE GRADING SURFACE

ESTIMATED BERM ARMORING QUANTITIES

LOCATION	REVETMENT CL. E (TON)	EROSION STONE (TON)	ENGINEERING FABRIC (SY)	EXCAVATION (CY)
BERM LINING - WEST ABUTMENT	130	450	1231	359
STONE TOE - WEST ABUTMENT	149	--	196	93
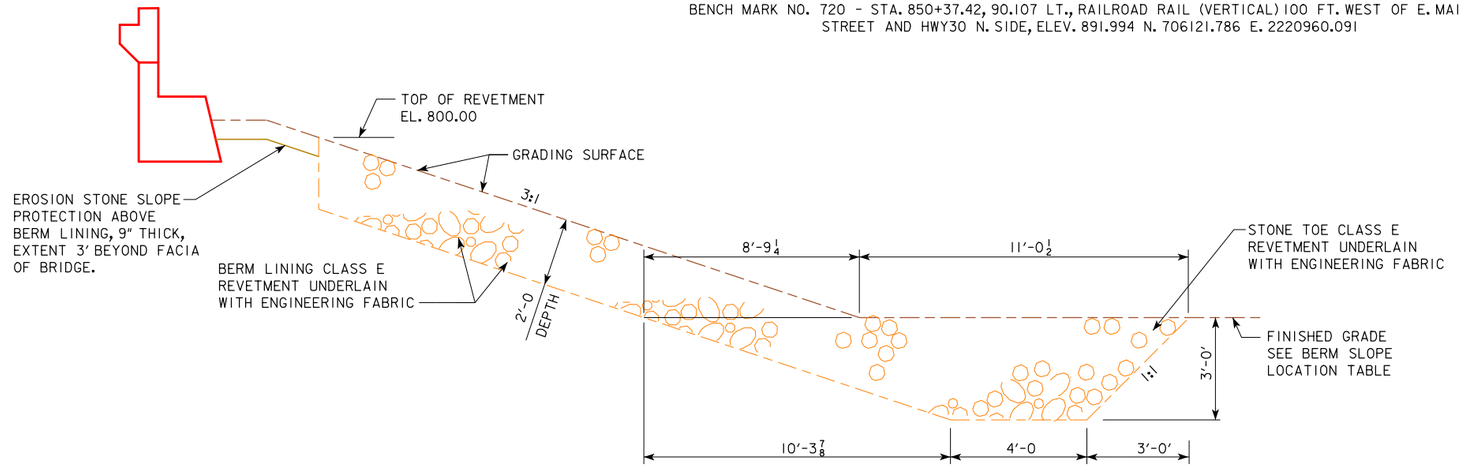
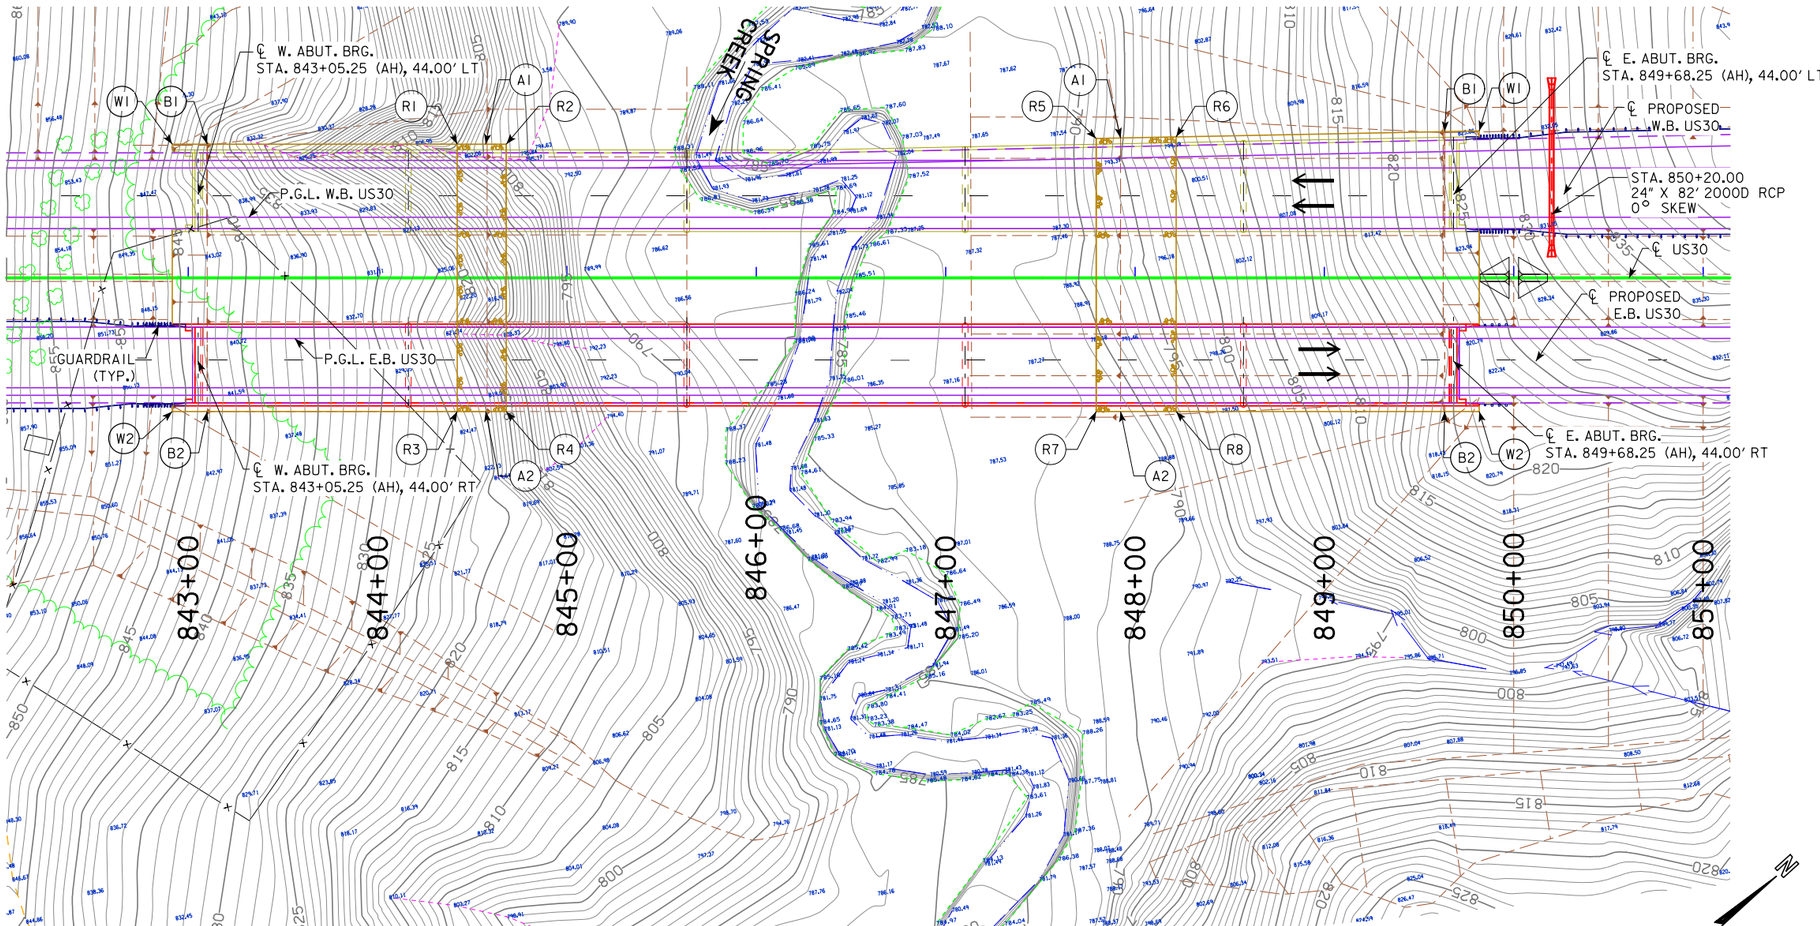
BERM LINING - EAST ABUTMENT	259	481	1432	459
STONE TOE - EAST ABUTMENT	149	--	196	93
TOTALS	687	931	3055	1004

EXCAVATION QUANTITY CALCULATED FROM GRADING SURFACE.

USE WHEN QUANTITY EQUALS OR EXCEEDS QUANTITY UNDER THE BRIDGE.





SITE PLAN

ALL DIMENSIONS ARE IN FEET UNLESS OTHERWISE NOTED OR SHOWN.

0 ENGLISH 80
SCALE IN FEET

REVETMENT LAYOUT:

(R1) 844+42.21, -70.58', TOP OF REVETMENT
(R2) 844+67.98, -70.58', BOTTOM OF REVETMENT
(R3) 844+42.21, 70.58', TOP OF REVETMENT
(R4) 844+67.98, 70.58', BOTTOM OF REVETMENT
(R5) 847+82.18, -73.63', BOTTOM OF REVETMENT
(R6) 848+21.75, -74.42', TOP OF REVETMENT
(R7) 847+82.18, 70.58', BOTTOM OF REVETMENT
(R8) 848+21.75, 70.58', TOP OF REVETMENT
