TO OFFICE: District 5

ATTENTION: Bob Younie

FROM: Gary Kretlow

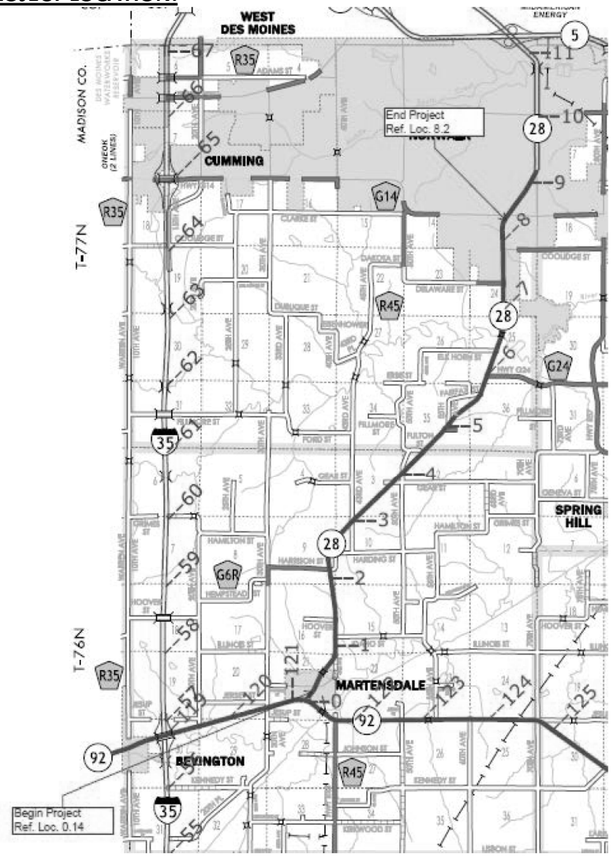
OFFICE: District 1

SUBJECT: FY 2023 3R Concept Statement - **FINAL**

DATE: October 26, 2021

COUNTY: Warren County
PROJ. NO.: STP-028-1(16)--2C-91
PIN: 22-91-028-010
FOLDER: ProjectWise Link

PROJECT LOCATION:



PROJECT DATA:
ROUTE: IA 28
LENGTH: 8 Miles
PLANNING CLASSIFICATION: Access Route
MAINTENANCE SERVICE LEVEL: B
NHS ROUTE: No
TRAFFIC: Current Year: 4200 ADT with 7% Trucks
Design Year: 5300 ADT with 7% Trucks

PURPOSE AND NEED:
IA 28 is the emergency detour for I-35 traffic between IA 92 and the IA 5 bypass. With multiple construction projects and incidents in this stretch of I-35 over the last 5 years, IA 28 has seen additional traffic that has deteriorated the surface.

FEASIBLE ALTERNATIVES:

ITEM#	ITEM DESCRIPTION		UNITS	QUANTITY	UNIT PRICE	TOTAL

					Subtotal	$229,000
					Project Total	**$3,507,780**

RECOMMENDATIONS:
It is recommended to use option B as a cost effective rehabilitation. Four foot paved shoulders and paved shoulders at the guardrail will be included.

FUNDS PROGRAMMED:
This project is programmed in Fiscal Year '23 with $3,532,500.

PROJECT IMPACTS:
Designed by: Consultant

Design Impact	Assistance Requested (Y/N)	Remarks
ADA:	N	
Agreements/Notification Letters:	Y	Warren County and cities of Norwalk and Martensdale
Bridges and Structures:	Y	Bridge Recommendations
Consultant:	Y	Final plans to be done by Consultant
Contracts:	N	
Design/Methods:	N	
Location and Environment:	Y	Desktop Review
Maintenance: (Martensdale)	Y	Need updated pipe inventory
Project Management:	N	
Railroad:	N	

RCE: (Chariton)	Y	Chariton RCE to get patching, clearing and grubbing, and guardrail quantities for final plans
Right of Way:	N	
Soils:	Y	Soils Recommendations
Survey/Photogrammetry:		
Systems Planning:	N	
Traffic and Safety:	Y	Safety Funds to be used for paved shoulders
Utilities:	Y	Review Slide/Erosion area for utilities
Other:		

CONCEPT ANALYSIS & SUPPORTING DATA:

Necessary supporting data may be linked in the analysis to ProjectWise.

Date of Field Review:
May 18th, 2021

Participants:
Todd Netley-Martensdale HMS
Gary Kretlow-District 1 Traffic Tech

PAVEMENT:

Existing Conditions:
The current IA 28 pavement is distressed and has multiple horizontal and vertical along the surface. The current IRI is 148.

Pavement History:
See attached sheets.

PMIS Data:
See attached sheet.

Pavement Design & dTIMS Recommendation:
The pavement determination was 3" of structure. The dTims map shows a recommendation of CIP in FY'23.

There are existing right turn lanes, in which the resurfacing is to be considered at:

- PCC pavement at Southbound, Delaware St. Milepost 7.39 (Sta 390+20 +/-)
- HMA pavement at Northbound, G24, Milepost 5.95 (Sta 311+57 +/-)

Subdrains:
Currently IA 28 has 50% coverage of IA 28 within the project limits. To get to 100%, approximately 30,000 lineal feet will be needed.

Patching/Curb Repairs:
From construction/maintenance with possible tabulation filled out or rough estimate.

ADA/Sidewalk/Trails:
Identify ADA ramps, sidewalk and trail impacts.
Complete Streets analysis determined not to include new trails.

SAFETY:

3R Design Criteria:

Acceptable Values for 3R Roadway Features						Project Values
DESIGN ELEMENT	FREEWAY	NON-FREEWAY				
Regulatory Speed (mph)	65/55	55	45	35	25	**55**
Minimum Vertical Curve (mph)	65/55	35	25	15	5	**35**
Maximum Horizontal Curve (degrees)	3	6	8	14	28	**6**
Maximum Gradient	3%	6%	7%	10%	13%	**6%**
Lane Width (feet)	12	12	11	11	11	**12**
Parking Lane Width (feet)	--	--	8	8	8	**N/A**
Shoulder Width (feet)	10/6	6	4	4	2	**6**
Foreslopes	3:1	3:1	3:1	--	--	**3:1**
Transverse Slopes	6:1	6:1	6:1	--	--	**6:1**
Horizontal Clearance (feet)						
Bridge Width	Approach Lanes + Shoulder Width			Approach Lanes + Offset		
Vertical Clearance - Over NHS (feet)	16.5	16.5	16.5	16.5	16.5	**16.5**
Vertical Clearance - Over Local (feet)	14.5	14.5	14.5	14.5	14.5	**N/A**

Crash Analysis:
ICAT quick report with 5 year crash history summary. W:\Highway\District1\Design\District 5 Concepts\Warren28\Crash

Corridor Crash History:
There were 63 total crashes between January 1, 2016 to December 31, 2020. Of the 63, 31 were animal related. 13 of the crashes were suspected minor or possible injury. The next major cause after animal was 8 run off the road right crashes. There were zero fatalities.

Intersection Crash History:
IA 28 and G24 is a Tier 2 intersection on the PCR Intersection website. It has a PCR of .10 for all crashes.

Intersection Analysis:
Need to review the radii at the intersection of G24 and IA 28. May need to improve the northeast corner of this intersection.

Additional Safety & Operation Considerations:
DRSP is recommending paved shoulder and rumble strips along IA 28. Safety funds will pay for this part of the project.

STRUCTURES and DRAINAGE:

Bridges:

FHWA No.	Maint. No.	Size/Type	Year Built	BDO/Rehab Year	Bridge Rail Height	End Post Type	Vertical Clearance	Future Projects
51041	9100.5S028	34'x40' Slab	1927	1983 Recon 2017 Deck Seal	33"	Vertical face	N/A	None planned
51051	9106.6S028	238'x40' Prestressed	1983	Approaches in 2018	33"	Vertical Face	N/A	None Planned

Bridge over drainage ditch MP 0.5 (Br. Maint. No. 9100.5s028, FHWA 051041) (Sta 28+33.5)
Has existing w-beam guard rail with RE-52. Replace the guard rail and place paved shoulders per Typical 7157.
Stop HMA overlay 30 ft from South, near, bridge end and 45 ft from north, far end. UAC the PCC bridge approaches.
Bridge rail height 2'-9" (min. 32" required for guardrail)

North River Bridge MP 6.6 (Br. Maint. No. 9106.6S028, FHWA 051051) (Sta 349+89.4 +/-)
UAC existing symmetrical thrie beam guard rail. Good. Stop HMA overlay 70 ft from bridge ends. UAC the PCC bridge approaches.
Existing Bridge rail height 2'-10" (min. 32" required for guardrail)
Bridge recommends a splash pad under the deck drain at this bridge.

Culverts/Pipes:
There are 5 pipes in the culvert inventory that have remarks of poor or needing work on the inlet and/or outlet. Here is a link to the inventory. W:\Highway\District1\Design\District 5 Concepts\Warren28\Culverts.xlsx

Existing stockpass can be plugged and abandoned (5'x7'x36') at Milepost 5.73 (Sta 302+70).

Consider culvert extensions with pipe and pipe collar. There are narrow shoulder, Type 3 object markers at existing culvert ends: Record Drawing: 1933 paving NRM-415AC.pdf

Existing 4 Type 3 object markers, Milepost 5.72 (Sta 302+40) North of Fairfax St., Exist 2'x2'x44' RCB, Extend with 30" dia, both sides 2005 Equivalent pipe RCB .pdf

Existing 2 Type 3 object markers, Milepost 1.69 (Sta 88+65) North of Hoover St., Exist. 5'x5'x42' RCB Extend with 66" dia, both sides

Existing 2 Type 3 object markers, Milepost 1.19 (Sta 63+44) North of Idaho St., Exist 4'x4'x64.9' RCB Extend with 54" dia, both sides.

Guardrail:
Provide all available information including height. Here is a link to the inventory spreadsheet.
W:\Highway\District1\Design\District 5 Concepts\Warren28\TrafficBarrier - Steel Beam Guardrail.xlsx

Drainage District:
No known drainage districts within the project limits.

PROJECT IMPACTS:

Impacts Map:
Includes all Office of Location and Environment Hotspots, Outstanding Iowa Waters, railroad crossings, bridge numbers, major utilities, etc.

Environmental:
Clearing and grubbing will be required within the project limits. Chariton RCE will need to tabulate locations by January 1, 2022.

TSMO/Traffic Control:
IA 28 traffic will be maintained at all times via flaggers and/or pilot cars.

ROW:
No right of way needs are anticipated, but an easement may be needed for the slide repair in Norwalk.

Agreements/Notification Letters:
Agreements may be needed with Warren county and the city of Norwalk. Norwalk and Martensdale will need a notification letter.

Project Coordination:
There is a slide repair to do within this project at MP 7.89. The Soils office has reviewed this and estimated $20,000 for the repair and survey will be required.

Previous Projects List:

Maximum superelevation rate (Refer to Section 2A-2)		6%	8%	8% (note 1)
Design lane width (ft)		12	12	12
Full depth paved width (ft)		12	12	12
Right turn lane (ft)		12	10	12
Climbing Lane (ft)		12	12	n/a
Left turn lane (ft)		12	10	n/a
Pavement cross-slope (on tangent sections)	Through lanes	2%	1.5% minimum, 2% maximum	2%
	Auxiliary and turn lanes	3%	3% maximum	3%
	Crown break at centerline	4%	4% maximum	4%
Shoulder cross-slope (on tangent sections)		4%	Shoulder cross-slope cannot be less than the adjacent lane, 6% max for paved or granular shoulders, 8% max for earth shoulders	4%
Curb type (Refer to Section 3C-2)	Design speed = 50 or 55 mph	6-inch sloped	6-inch standard	6" standard (note 2)
	Design speed ≥ 60 mph	4-inch sloped	6-inch sloped	n/a
Foreslope (For fill areas greater than 40 ft, contact the Soils Design Section for assistance)	Adjacent to shoulder	10:1 for 4' then 6:1	3:1	3:1 (note 3)
	Beyond standard ditch depth and design clear zone	3.5:1	3:1	0.5" per foot (to center of ditch)
	Curbed roadways	2%	not steeper than 3:1	2% (note 2)
Backslope (For cut areas greater than 25 feet, contact the Soils Design Section for assistance with backslope benches.)		3:1	2.5:1	1.5:1 (note 4)
Transverse Slopes	w/ drainage structures	8:1	6:1	unknown (note 5)
	w/o drainage structures	10:1	6:1	unknown (note 5)
Ditches (Refer to Section 3G-1)	Outside ditch (depth x width) (ft)	5 x 10	--	unknown (note 6)
Bridge width—new*	Bridge length ≤ 200 ft	design lane widths + effective shoulder widths	design lane widths + effective shoulder widths	n/a
	Bridge length > 200 ft	design lane widths + effective shoulder widths	design lane width + 4' right and left of the design lane widths	n/a
Bridge width—existing*		design lane widths + no less than 2 ft left and right	design lane widths + 2 ft. offset left and right	40'
Vertical clearance (ft) (above lanes, shoulders and 25 feet left and right of the center of railroad tracks)	Over primary	16.5	16	n/a
	Over non-primary	16.5 at interchange locations, 15 at all other locations	14	n/a
	Over railroad	23.3	23.3	n/a
	Sign trusses and pedestrian bridges	17.5	17	n/a
Structural Capacity		Contact Office of Bridges and Structures	Contact Office of Bridges and Structures	n/a
Level of Service		B	B	B

*FHWA notification via email is required if acceptable critera is not met on the NHS system (No formal design exeption is required)

Note 1: Record Drawings (1935) indicate IA 28 was constructed with a maximum superelevation rate of 8%. Resurfaced roadway shall match existing superelevation rate.

Note 2: Existing Curb is located only on sidestreet and driveway returns with the Corporate Limits of Norwalk. IA 28 does not include any curb within the project limits.

Note 3: Record Drawings (1935) indicate IA 28 was constructed with a foreslope of 3:1. 1994 As-Builts indicated foreslopes adjacent to turn-lanes were constructed at 4:1 slopes.

Note 4: Record Drawings (1935) indicate IA 28 was constructed with a backslope of 1.5:1.

Note 5: Record Drawings do not indicate the existing Transverse Slopes. Transverse Slopes will not be impacted by this project.

Note 6: Record Drawings do not indicate the depth or width of existing dithes, only that they had a 2' mi width. Ditches will not be impacted by this project unless there is 'reshaping' to bring them to their original condition.

Design year ADT = See Note 8.

Design Manual Section 1C-1
Last Updated: 04-29-19

Effective Shoulder Width and Type for Two-Lane Highways

Preferred (values shown in feet)			Acceptable (values shown in feet)			Project Values
	Rural Roadways	Urban Roadways		Rural Roadways	Urban Roadways	
Turn lanes with shoulders	6	6	Turn lanes with shoulders	6	0	6 (note 7)
Turn lanes with curbs	6	See Section 3C-2	Turn lanes with curbs	6	0	n/a
	Effective Shoulder Width	Paved Width		Effective Shoulder Width	Paved Width	
Climbing Lanes	6	4	Climbing Lanes	4	0	n/a
Two-Lane Highways	Effective Shoulder Width	Paved Width	Two-Lane Highways	Effective Shoulder Width	Paved Width	
Routes where bicycles are to be accommodated	10	10	Design year ADT > 2000 vpd	8	0*	4' paved, 2' granular (note 8)
On roadways approaching urban areas (due to increased bike traffic)	10	10				
On all curves with a superelevation rate of 7.0% or greater	10	10				
On roadways with design year ADT > 5000	10	6	Design year ADT between 400 - 2000 vpd	6	0*	
On all other NHS	10	6				
On non-NHS routes with design year ADT > 3000	10	6	Design year ADT < 400 vpd	4	0*	
On non-NHS routes with design year ADT < 3000	8	0*				

*Requires safety edge-Refer to Section 3C-6

Curbs should be located beyond the outer edge of the effective shoulder width in rural areas

Refer to Section 3C-2 for curb offsets in urban areas

Notes:

Note 7: Existing Turn Lanes with Shoulders are only with the Corporate Limits of Oskaloosa. The existing shoulders a granular.

Note 8: 4' Paved Shoulders are being installed with this project in place of existing granular shoulder. What's left of the the existing granular shoulders will be topped with granular material to bring the granular shoulder up to the new roadway profile elevation and to bring the gravel shoulders back to a standard 4%-6% slope.

IA 28 is NOT a NHS route and has a 2042 Design Year ADT of 6,033 VPD.

D2 Questions for District 5:
Date 3/11/2022

1. PROJECT LIMITS
    a. Beginning of Project is at transition from PCC to HMA, 0.13 miles north of the intersection of IA 92 and IA 28. Please verify.
    b. End of Project is at transition from HMA to PCC, 0.17 miles south of the intersection of IA 28 and North Avenue. Please verify.

2. FUNDING DIVISIONS
    a. Should the area of the unincorporated town(s) south of Norwalk (Prole) be included in the Urban Funding Division?
        i. If these town(s) should be included in the Urban Funding Division then pinpoint those limits. No limits were designated limits in the Mahaska County Assessor's GIS map and signs could not be found in Google Streetview.
    b. The 'Additional Safety & Operation Considerations' Section on Page 6 of the Project Concept states: "DRSP is recommending paved shoulder and rumble strips along IA 28. Safety funds will pay for this part of the project." Are safety Funds required for the shoulder work and guardrail (it does not appear that a parallel HSIPX Safety project was setup)?

3. COLD IN-PLACE RECYCLING
    a. Does the District want the 4" Cold-In-Place Recycling at Tapers and Turning Lanes? There was previous discussion regarding whether the Cold-In-Place train could be setup to complete these operations. Discuss alternatives if CIR cannot be used at Tapers and Turning Lanes. Below is a list of the only Turn Lanes within the Project cooridoor:
        i. HMA pavement at Northbound Right Turn Lane, G24, Milepost 5.95 (Sta 315+67).
        ii. PCC pavement at Southbound Right Turn Lane, Delaware St., Milepost 7.39 (Sta 389+86.3).
    b. Instead of 24' of 4" Cold-In-Place Recycling, would the District prefer what was specified from Morning Sun to US 61 on the IA 78 (19)(10) Henry/Louisa County Project (STP-078-4(19)--2C-44 / HSIPX-078-5(10)--3L-58, PW: 4407801009)? The IA 78 (19)(10) Henry/Louisa County Project featured milling off 4" of 24' wide existing pavement AND 8' gravel shoulder (4' each side) and put back 3" of CIR over the 24' traveled way and new 4' paved shoulders (8' total). The thickness of CIR placed back on IA 28 would be the same as what was done for IA 78; since the HMA Paved Shoulders on IA 28 are scheduled to be 4' wide. Doing this reduces the net profile gain to 2" (instead of 3") and eliminates the Base Widening bid item.

4. 3" HMA RESURFACING
    a. Page 9 of the Project Concept indicates 4" CIR + 3" HMA Resurfacing. Please confirm the makeup of the 3" HMA Resurfacing. FYI, IA 78 (19)(10) had 1.5" Intermediate Course + 1.5" Surface Course over the top of its 3R.

5. GRANULAR SHOULDER
    a. Shall we assume Granular Shoulder is 1" below existing edge of pavement due to washout?

6. SHOULDER AND CENTERLINE RUMBLES
    a. Should the shoulder and centerline rumbles be skipped in the area of the unincorporated town of Prole? If so, see FUNDING DIVISIONS question above regarding Prole limits.

7. STOCKPILED MATERIALS:
    a. Confirm that Maintenance would like the following Stockpiled Materials:
        i. HMA Millings
        ii. Class 13 Excavation
        iii. Steel Beam Guardrail
        iv. Steel Beam Guardrail Posts
    b. Verify the location of Stockpiled Materials (Primary Location? Secondary location? Is there a preferred distribution of materials across the sites)
        i. Primary Location:
        ii. Secondary Location:
    c. Maintenance Contact Person and Phone Number:

8. CONTINGENCY PERCENTAGES
    a. HMA Pavement Contingency for Irregularities: 5.0% is Typical. Confirm.
    b. Granular Shoulder: 20% has been used on recent projects. Confirm.
    c. Patches Contingency: 15% is Typical. Confirm.

9. LETTING DATE
    a. Letting Date is currently scheduled for 10/18/2022. Road Design Team suggests revising the Letting Date to 11/15/2022 to match the 11/15/2022 Letting Date of FY 2023 Project NHSX-092-5(70)--3H-91 Warren County, which passes by the beginning of this IA 28 Warren County project. This allows for the possibility to Tie the two projects as well as to stagger other District 5 Projects the Road Design Team is working on.

10. LONGITUDINAL SUBDRAINS
    a. Page 5 of the Project Concept indicates that the proposed improvement includes 50% placement of additional subdrains (existing coverage is 50%). Please confirm that the District would like to install the additional 50% of subdrain.

11. SLIDE REPAIR
    a. Page 7 of the Project Concept indicates that “There is a slide repair to do within this project at MP 7.89. The Soils office has reviewed this and estimated $20,000 for the repair and survey will be required.” Will the Slide Repair be added to this project or will it have another Project Number? FYI, the 'ROW' section on Page 7 of the Project Concept suggests that the slide repair may be included in this 3R project since “an easement may be needed for the slide repair in Norwalk.”

12. STRUCTURES
    a. FHWA 51041, Maint. 9100.5S028 (34’x40’ Concrete Slab Bridge, STA 28+33.5, MP 0.5). Discuss possible Repairs and Responsibilities per the NOTE on Page 6 of the Project Concept and the RECOMMENDATION within the Bridge Review Document STP-028-1(16)--2C-91_BSB_ Review.xlsx. The Project Concept and Bridge Review Document appear to conflict.
        i. NOTE on Page 6 of the Project Concept “UAC the PCC bridge approaches.”
        ii. RECOMMENDATION within the Bridge Review Document STP-028-1(16)--2C-91_BSB_ Review.xlsx. “Recommend to repair spalling and cracks on both bridge approaches.”
    b. FHWA 51051, Maint. 9106.6S028 (238’ x40’ PPCB Bridge, STA 349+89.4, MP 6.6. Discuss Coordination. Discuss possible Repairs and Responsibilities per the NOTE on Page 6 of the Project Concept and the RECOMMENDATION within the Bridge Review Document STP-028-1(16)--2C-91_BSB_ Review.xlsx.
        i. NOTE on Page 6 of the Project Concept “Bridge recommends a splash pad under the deck drain at this bridge.”
        ii. RECOMMENDATION within the Bridge Review Document STP-028-1(16)--2C-91_BSB_ Review.xlsx. “Recommend to repair erosion damages on below span#3, left-side of near pier#2 at near abutment. See inspection report photo# 7,8,9 and 10 in SIIMS for inspection date: 3/30/2021."

13. SPECIAL FEATURES
    a. Are there any special features not shown on the plans (Schools or businesses with particular entrance needs, mailboxes, signage, structures, traffic control loops at signalized intersections) that need to be taken into consideration, either design or Traffic Control-wise?
    b. Is there any additional information or District preferences that can be provided regarding the existing stockpass that will be plugged and abandoned (5’x7’x36’) at Milepost 5.73 (Sta 302+70), per page 6 of the Project Concept?

14. SPECIAL EVENTS
    a. Are there any Special Events that need to be identified? If so, what are their schedules?

15. INTERSECTION ANALYSIS
    a. Page 5 of the Project Concept states “Need to review the radii at the intersection of G24 and IA 28. May need to improve the northeast corner of this intersection.” Has this analysis been performed?

16. EXISTING DRAINAGE PROBLEMS
    a. Are there existing drainage problems within towns or in rural areas that may need to be mitigated (shoulder washout, standing water, etc.)?

17. FIELD MAINTENANCE TABS
    a. Please confirm that the FIELD Tabs (Tree Clearing, patching, curb repairs, culverts, etc.) are pending collection, review, and distribution to Road Design.

18. ADDITIONAL TOPICS TO BE RESOLVED AS THE PROJECT PROGRESSES
    a. Project Coordination
    b. Tied Projects
    c. Pavement Specifications
    d. Traffic Control
    e. OLE Information
    f. City and County Agreements

STATION TO STATION		(TL) Feet	(P) Feet	(G) Feet	(RBW) Feet	Division
XX+XX	XX+XX	0-12	4	2	4	1

① Finished slope shall match existing pavement except the minimum allowable slope is 2.0% and the maximum allowable slope is 3.0%. Section may be modified as directed by the Engineer through areas of special shaping.

② Finished slope of Right Turn Lanes shall match existing except the minimum allowable slope is 3% and the maximum allowable slope is 4%. Section may be modified as directed by the Engineer through areas of special shaping.

③ Finished slope of Shoulder shall have a minimum allowable slope of 4% and a maximum allowable slope of 6%. Section may be modified as directed by the Engineer through areas of special shaping.

④ UAC existing subdrain. All existing subdrain shall remain functional at all times (do not plug or crush). New subdrain shall be in contact with the granular material below the existing mainline pavement (see Tab 104-9 on CS sheets for proposed locations).

⑤ The surface of the existing granular shoulder is estimated to be 1.0" below the surface of the edge of the existing pavement.

General Notes:

1. Stationing on typical sections does not include gapping for bridges, sideroads, or entrances. Refer to tabulations and details for precise stationing and quantities.
2. See Tab 100-25 for Pavement quantities.
3. See Tab 112-9 for Granular Shoulder quantities.
4. See Tab 106-5 for Base Widening quantities.

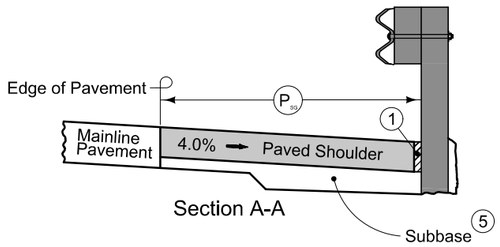
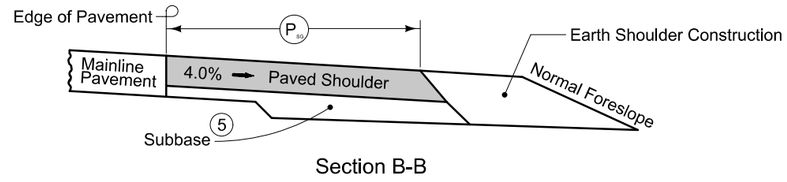
PLAN VIEW

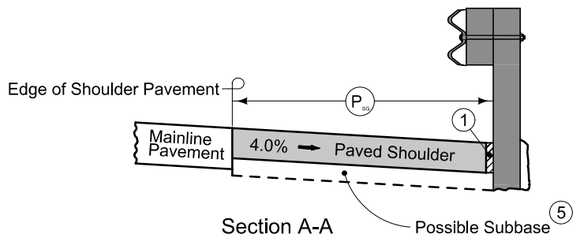


Section A-A

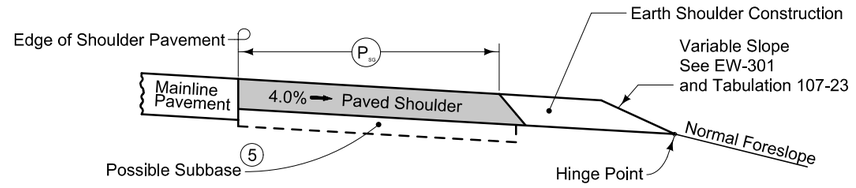


Section B-B

NEW CONSTRUCTION



Section A-A



Section B-B

EXISTING SHOULDER

9" HMA Paved Shoulder at guardrail. 8" PCC may be substituted with the following jointing layout:

Match mainline pavement joint spacing. When mainline pavement is 8" or greater in thickness, place additional transverse 'C' joints in shoulder at mid-panel of the mainline pavement. Place longitudinal 'C' joint at P/2 from edge of mainline pavement when P is greater than 10' wide. Terminate longitudinal joint at transverse joint less than 10' in length.

Compaction of HMA is required to face of guardrail post. Hand compaction will be allowed under guardrail. Removal and reinstallation of guardrail will be allowed with no additional payment.

Refer to Tabulation 112-9 for shoulder quantities.

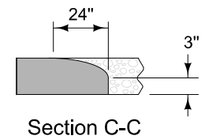
(1) PCC option only: When guardrail posts are installed prior to construction of PCC paved shoulder, fasten form board to the face of guardrail posts for the length shown.

(2) Continue paved shoulder 20 feet beyond the center of the first post.

(3) Shoulder may be notched for first 2 posts or post sleeves may be installed through pavement. Do not drive posts through pavement.

(4) 'KT' joint (per PV-101) for PCC shoulder.
'B' joint (per PV-101) for HMA shoulder.

(5) Refer to other details in the plan.



Section C-C
Roll down at granular shoulder or earth.

PAVED SHOULDER AT GUARDRAIL
(GRANULAR SHOULDER ADJACENT TO MAINLINE)

The Contractor is to take appropriate measures to prevent standing water during construction
