

On Tuesday, November 3rd, 2020 at 3:40 am, a WWD was reported traveling EB in the WB lanes of US-30 near I-380.

A review of cameras showed the WWD passing CRTV26 east of Edgewood and continuing the wrong way until C St, where they made a U-turn and returned EB in the EB lanes. The point of entry cannot be exactly determined because CRTV22, CRTV23, CRTV24, CRTV25, and CRTV60 were all disabled between 2:55 and 4:30 am. The point of entry is most likely either (1) Williams Blvd or (2) Edgewood Rd (with 50% probability of each).

Coincident with this event, two pickup trucks entered US-30 WB at 6th St at 3:29 am, turned around, and went EB in the WB approximately until Kirkwood Blvd before turning around. They were just ahead of the original WWD. These were construction vehicles weaving between closed lanes and live lanes (avoiding curing patches).
